

Group 2

Open Source Virtual Satellite

Satoshi Ikari
The University of Tokyo

Self-introduction

2

- Assistant professor of Prof. Nakasuka's lab.
- Several experiments on micro-spacecraft development and operation
 - ▣ Attitude control, C&DH, Science instruments...
 - ▣ Software development for spacecraft

PRISM (2009): 8kg
Remote Sensing

Nano-JASMINE: 33kg
Astrometry

PROCYON(2014): 65kg
DeepSpace Exploration

EQUULEUS(2019): 14kg
Lunar Exploration

Issues on current nano-satellite development

3

- Hardware First
- Many **standardized** and **modularized** H/W components, but no S/W components.
- Many software bugs
 - ▣ We need more evaluation or hands-on training opportunities on S/W development
- Real H/W components are still expensive
 - ▣ Opportunity to access space is still limited

We have to more focus on S/W development, standardization, modularization, education, and reliability

My dream

4

- I want to develop, evaluate, and demonstrate **every S/W** related to space activity **in a virtual space in PC**
 - ▣ Every S/W: On-board C&DH, ADCS, Thermal, Power etc...
On-ground C&DH, image processing, etc...
- The virtual space **must seamlessly connect with real** hardware components

Seamless Connection

Open Source

Virtual Satellite

Method
Sub objective

Main objective

Peer review

Efficient and Effective R&D

Education

Reuse

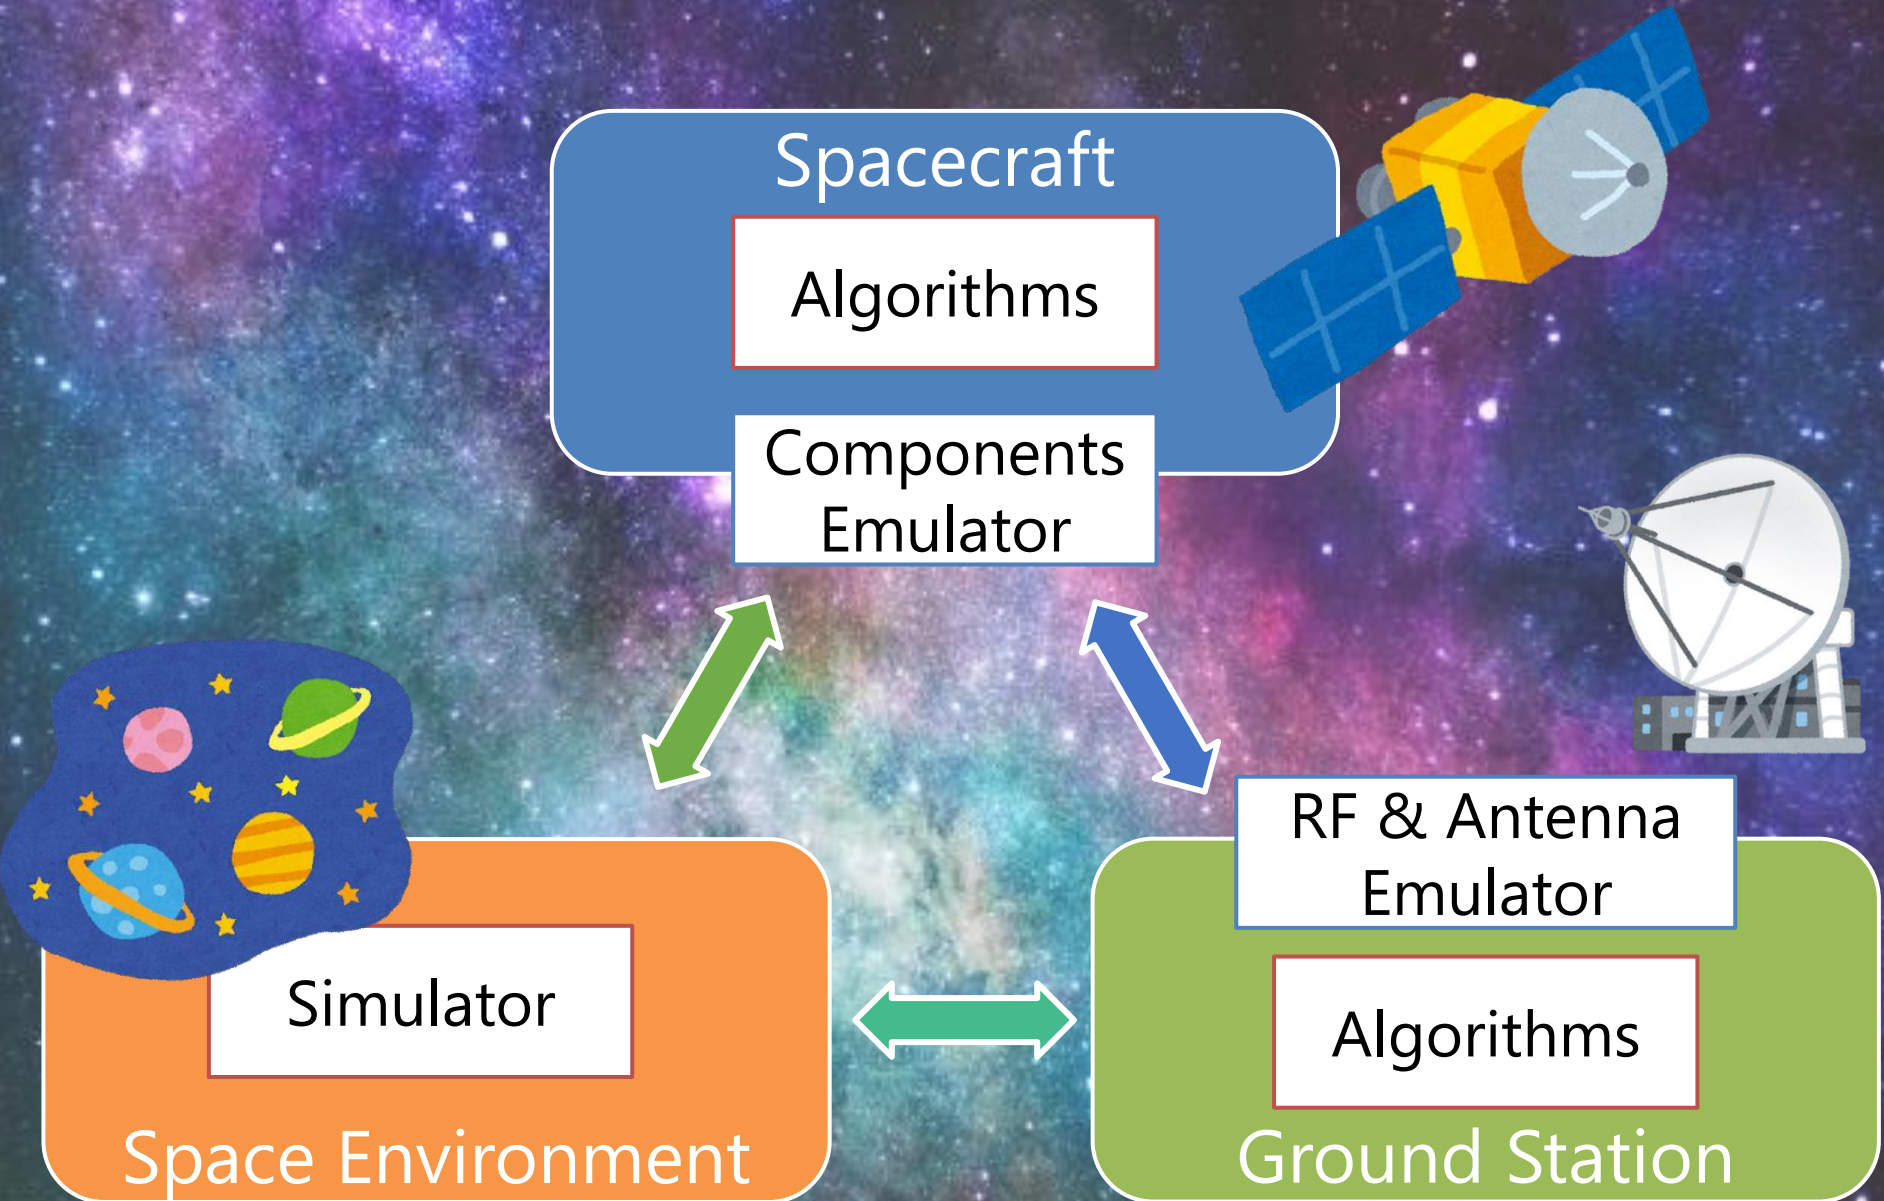

Modularization

Reliability of developed S/W

Standardization

Experience of virtual satellite operation

My Dream: Virtual Satellite

Why Open Source? Why in UNISEC?

7

- The dream is **too huge** to achieve by one researcher, one laboratory, and one country
 - ▣ I need collaboration with many **motivated people** all over the world
- The virtual space is useful for **all satellite developers** especially for university **researchers and students**
 - ▣ Experts: Reliable and efficient development
 - ▣ Beginners: Low cost but effective training

The project is suitable for concept of UNISEC-Global

Open Source Virtual Satellite

Efficient and Effective R&D

Standardization

Reuse

Modularization

Education

Spacecraft

Algorithms

Reliability of developed S/W

Experience of virtual satellite operation

Components

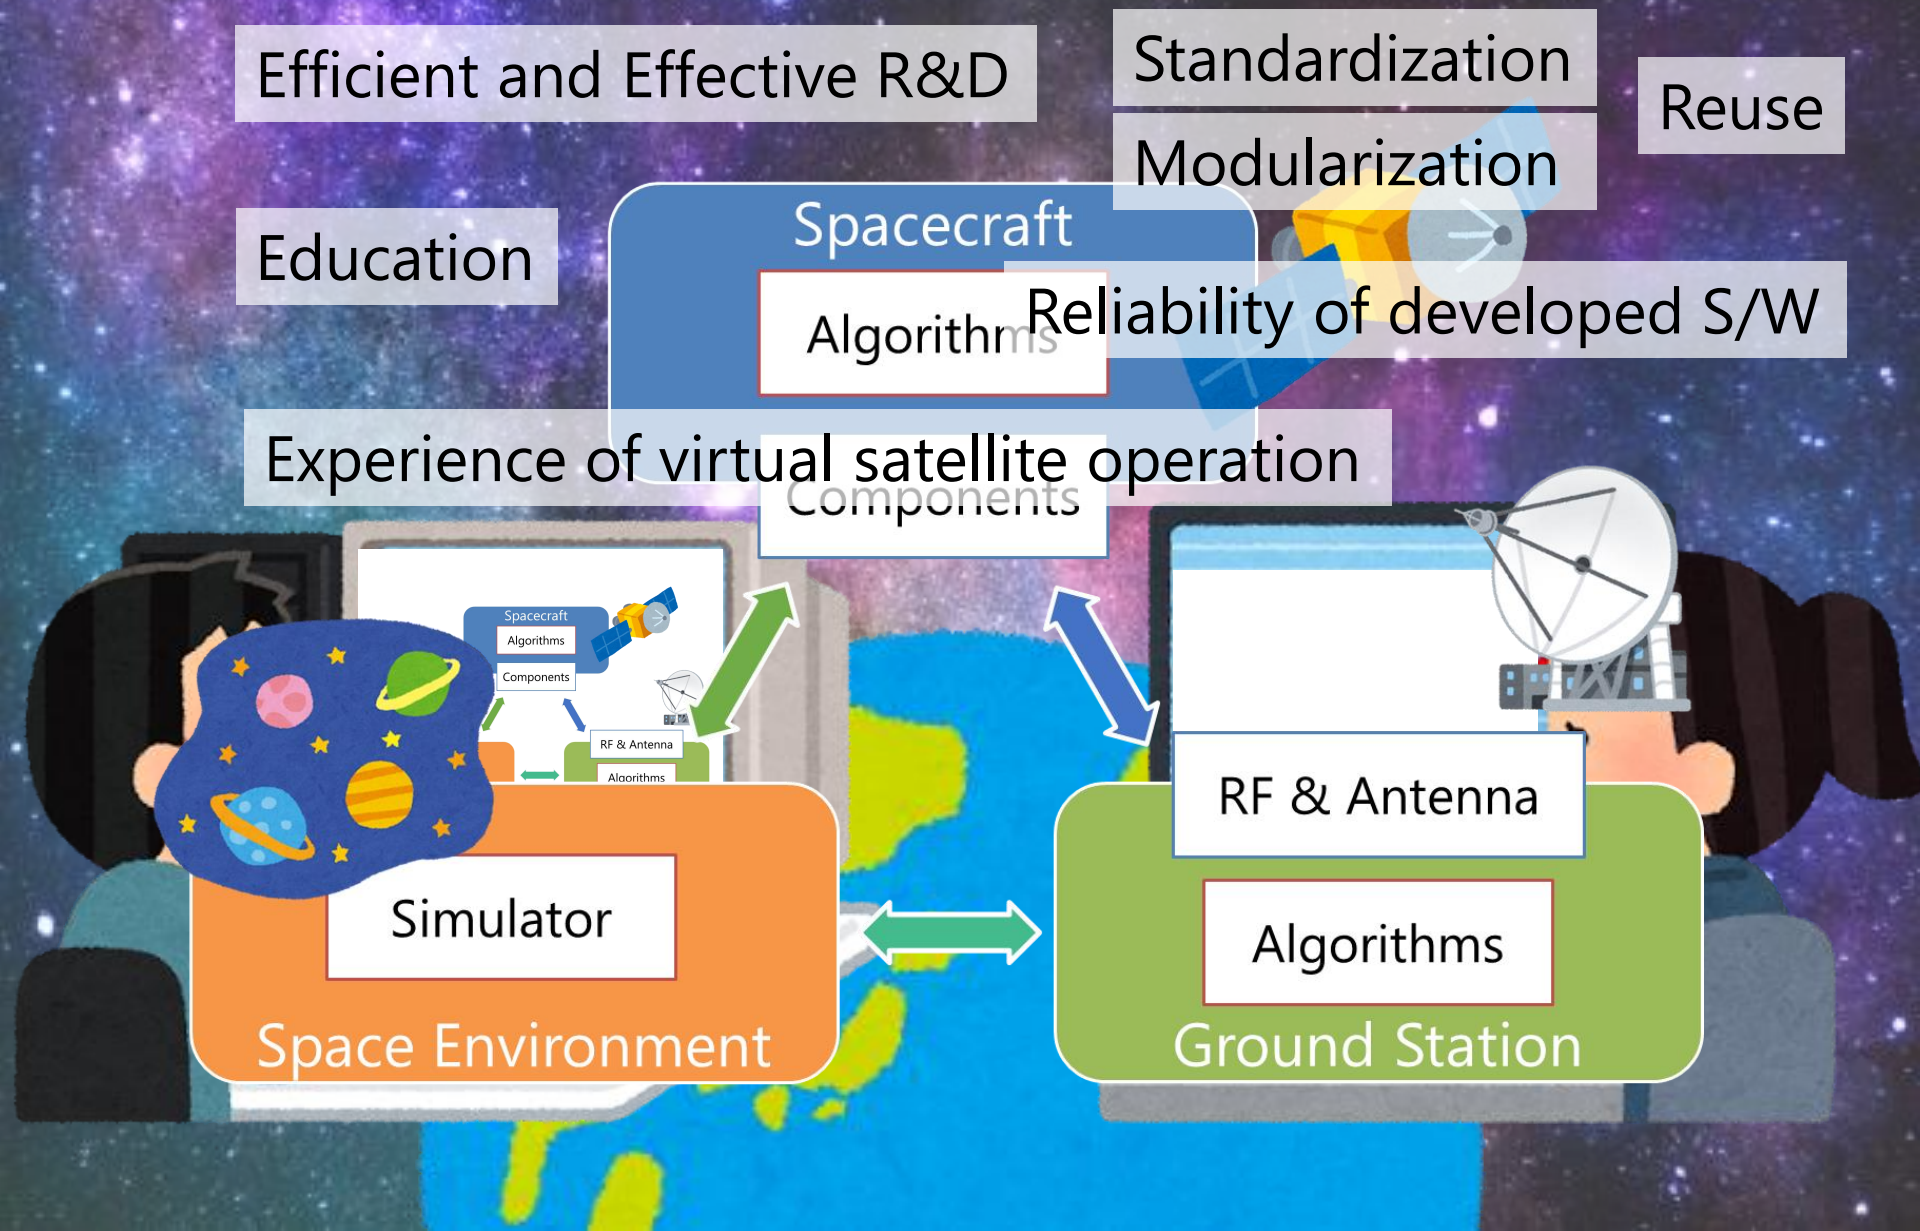

Simulator

Space Environment

RF & Antenna

Algorithms

Ground Station

Agenda of our group

9

- What kind of functions do we need?
 - ▣ For beginners, for experts,
 - ▣ For education, for reliability, and for efficiency
- How to build a team for this project?
 - ▣ What kind of team members and tools do we need?
- What can we do as a first step of this mighty project?
