Why CubeSat Training?

5

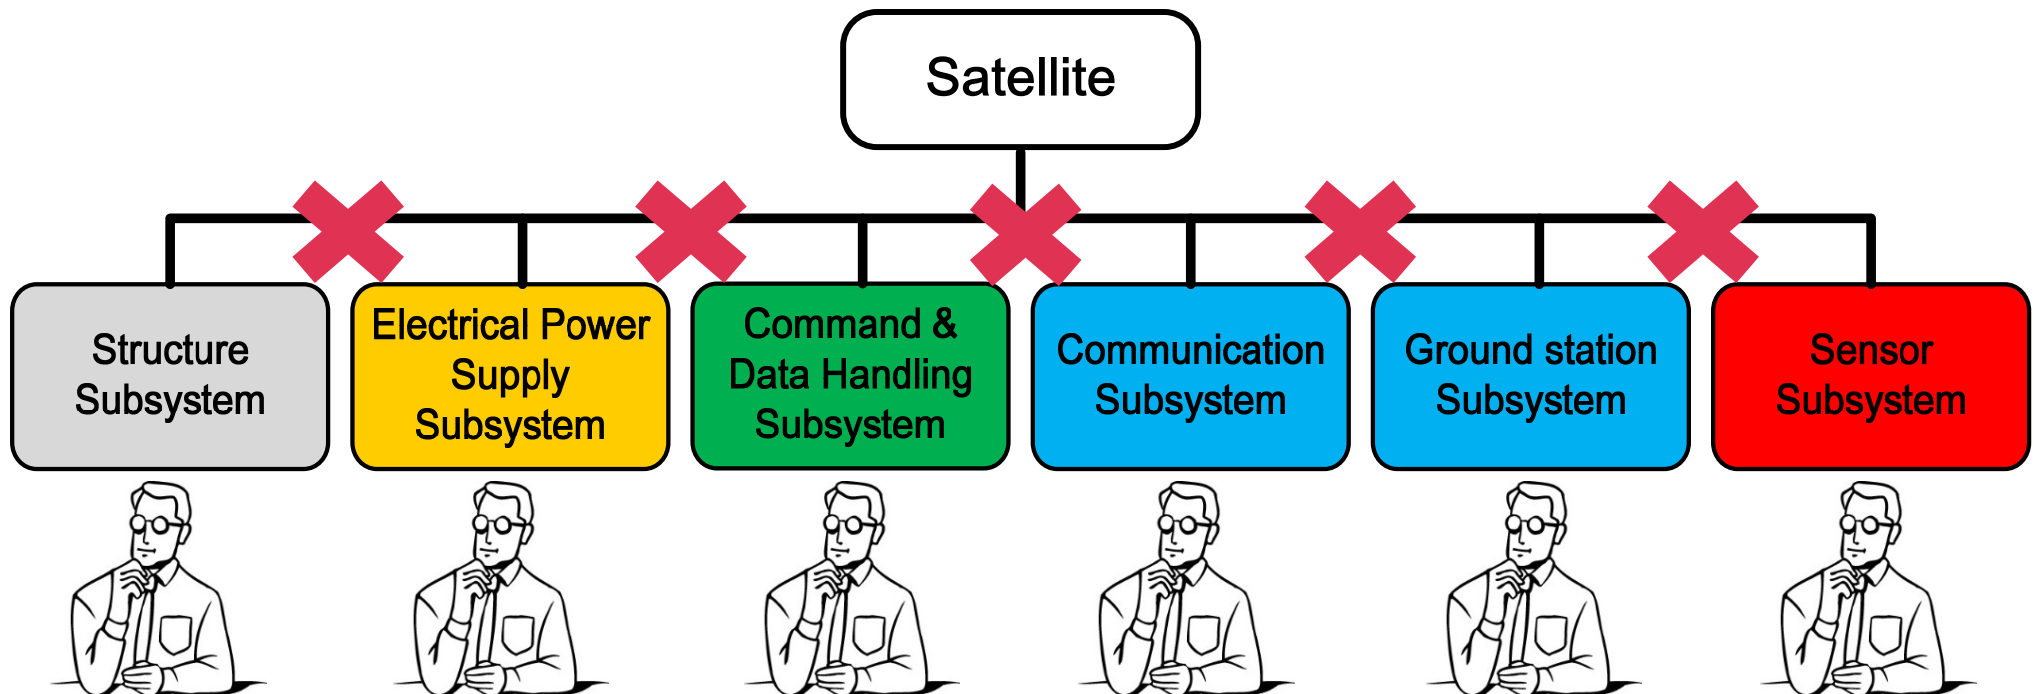

- Satellite is possible to learn variety of elemental technologies
 - Mechanical engineering, electronic engineering and communication engineering and **it's systems integration.**
 - **To learn the space systems engineering,** CubeSat development project based learning is a very effective training way.

Why Training Package?

6

- It is sometimes **hard to gain knowledge or experience** of the **whole development process** because the roles are divided into team members.

- Not only a **local optimization insight** but also **global optimization insight** for developing the system.
- Our training program offer a such kind of experience before starting real satellite or real system design/development in a **short time and reasonable cost**.

- Systems Engineering and Project Management to Realize Large and Complicated Systems.

Space Systems “CubeSat”

CubeSats are a class of research spacecraft called nanosatellites. CubeSats are built to standard dimensions (Units or “U”) of 10 cm x 10 cm x 10 cm. They can be 1U, 2U, 3U, or 6U in size, and typically weigh less than 1.33 kg per U. CubeSats are deployed from a Picosatellite Orbital Deployer (POD). — NASA, 2018.

Systems Engineering

“System engineering” is a robust approach to the design, creation, and operation of systems. In simple terms, the approach consists of identification and quantification of system goals, creation of alternative system design concepts, performance of design trades, selection and implementation of the best design, verification that the design is properly built and integrated, and post-implementation assessment of how well the system meets (or met) the goals.— NASA Systems Engineering Handbook, 1995.

During 2017.10~2019.11

- ◆ Annual Training for Instructors
- ◆ University (UAE University, Titec, etc.)
- ◆ International Space University (France)
- ◆ United Nation Workshop (South Africa)
- ◆ SHSSP(2019,2020), SSP(2019)
- ◆ Science Museum
- ◆ Japan International Cooperation Agency(JICA) (Japan)
- ◆ Company
- ◆ Space and Space related Agency (Kenya, Oman, etc.)

HEPTA-Sat Kit?

HEPTA-Sat Kit?

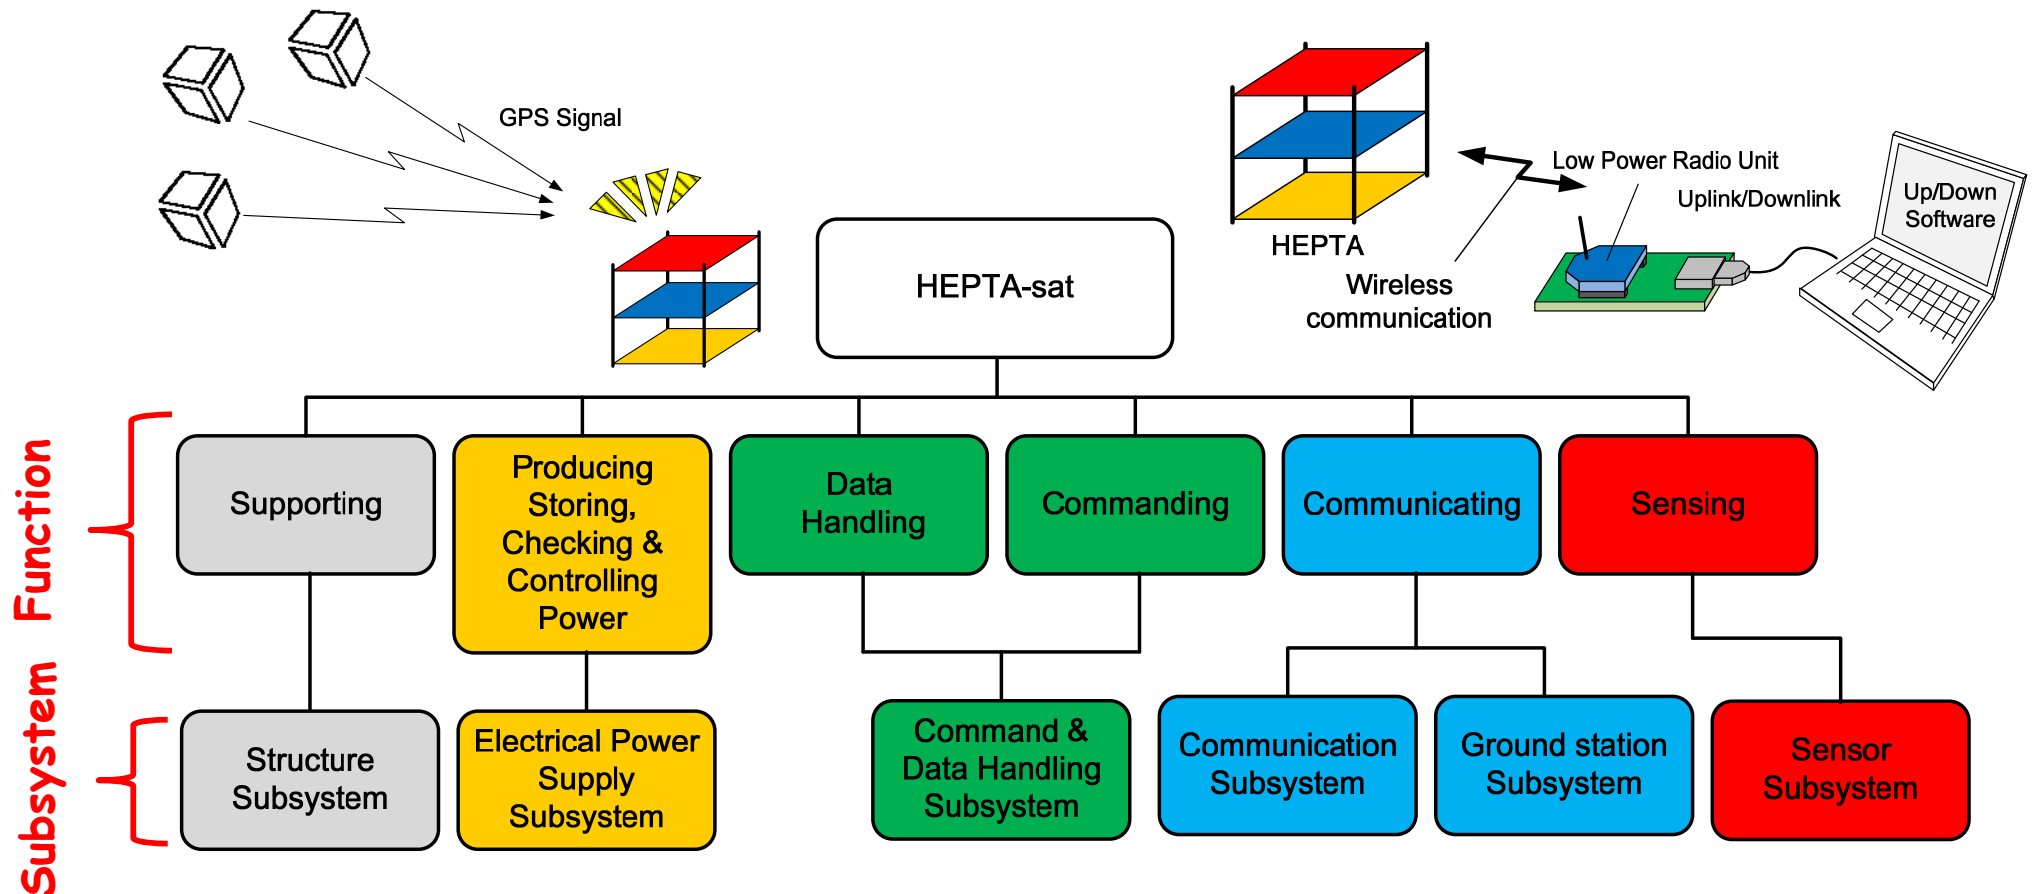

HEPTA-Sat Kit?

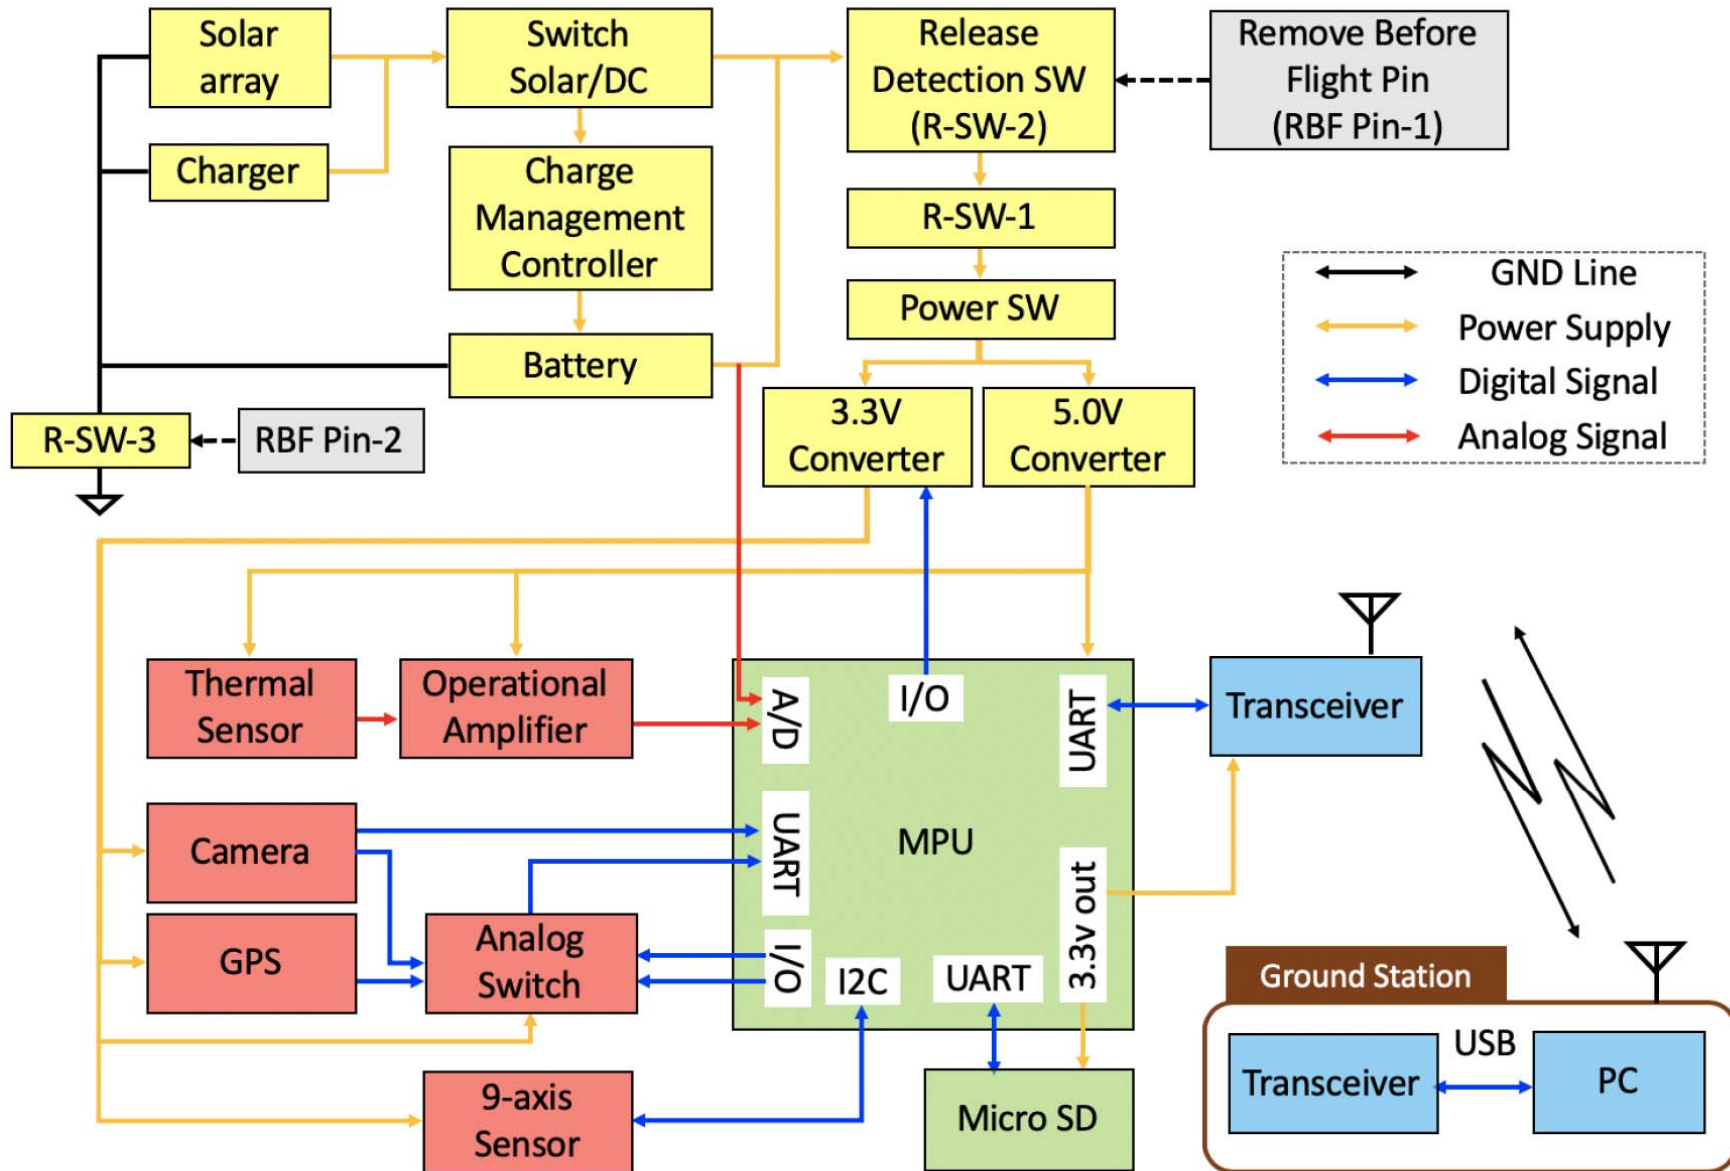

HEPTA-Sat Kit?

- Composed of 6 function and 6 primary sub-systems.
- You can learn how each subsystem functions and how to integrate subsystems into a satellite through experiencing the process of **assembly**, **integration** including programing & system implementation and **test**.

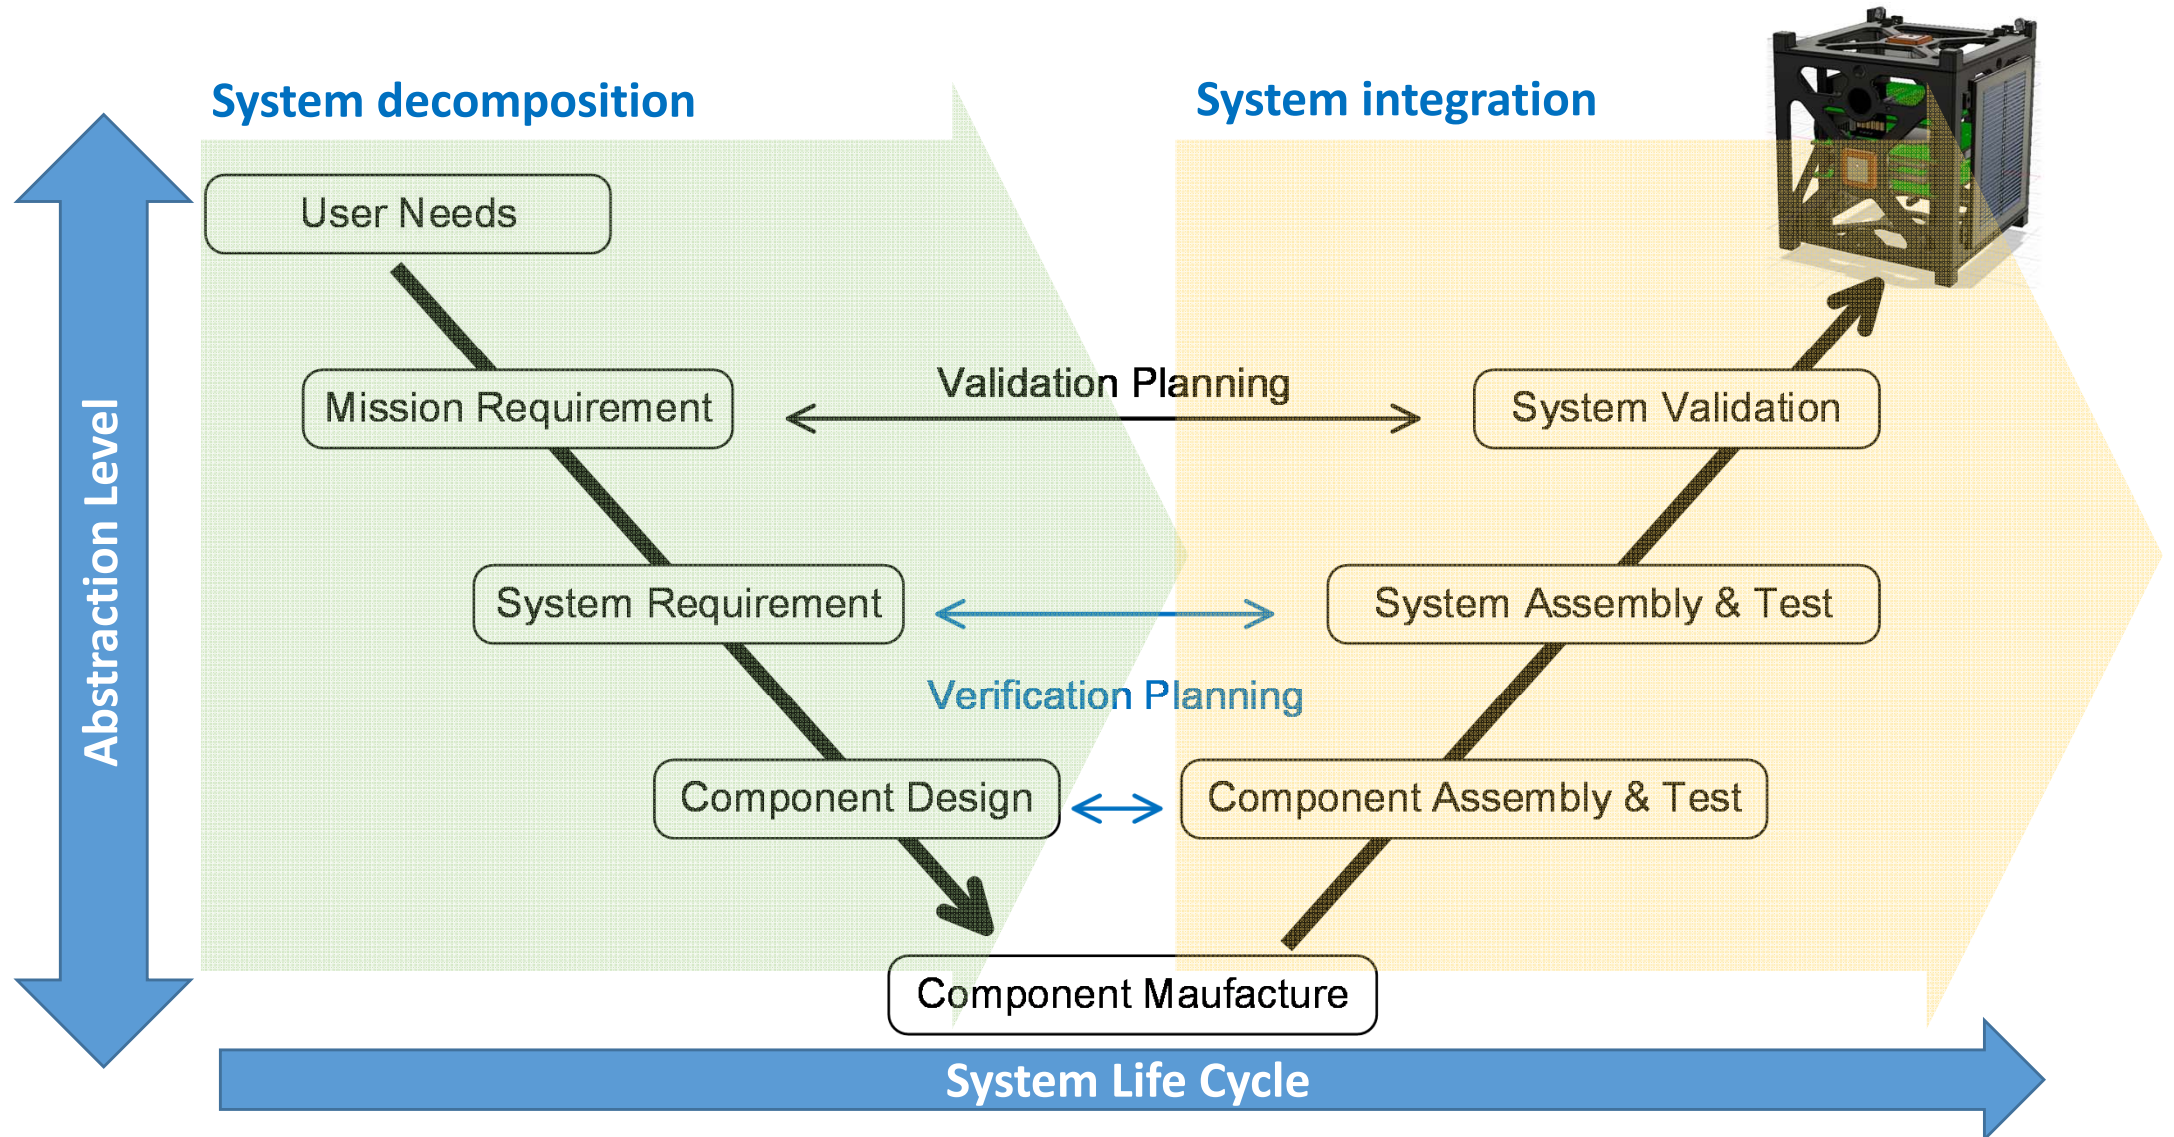

HEPTA-Sat Kit? – Physical View -

- Composed of 6 function, 6 primary sub-systems and physical elements.

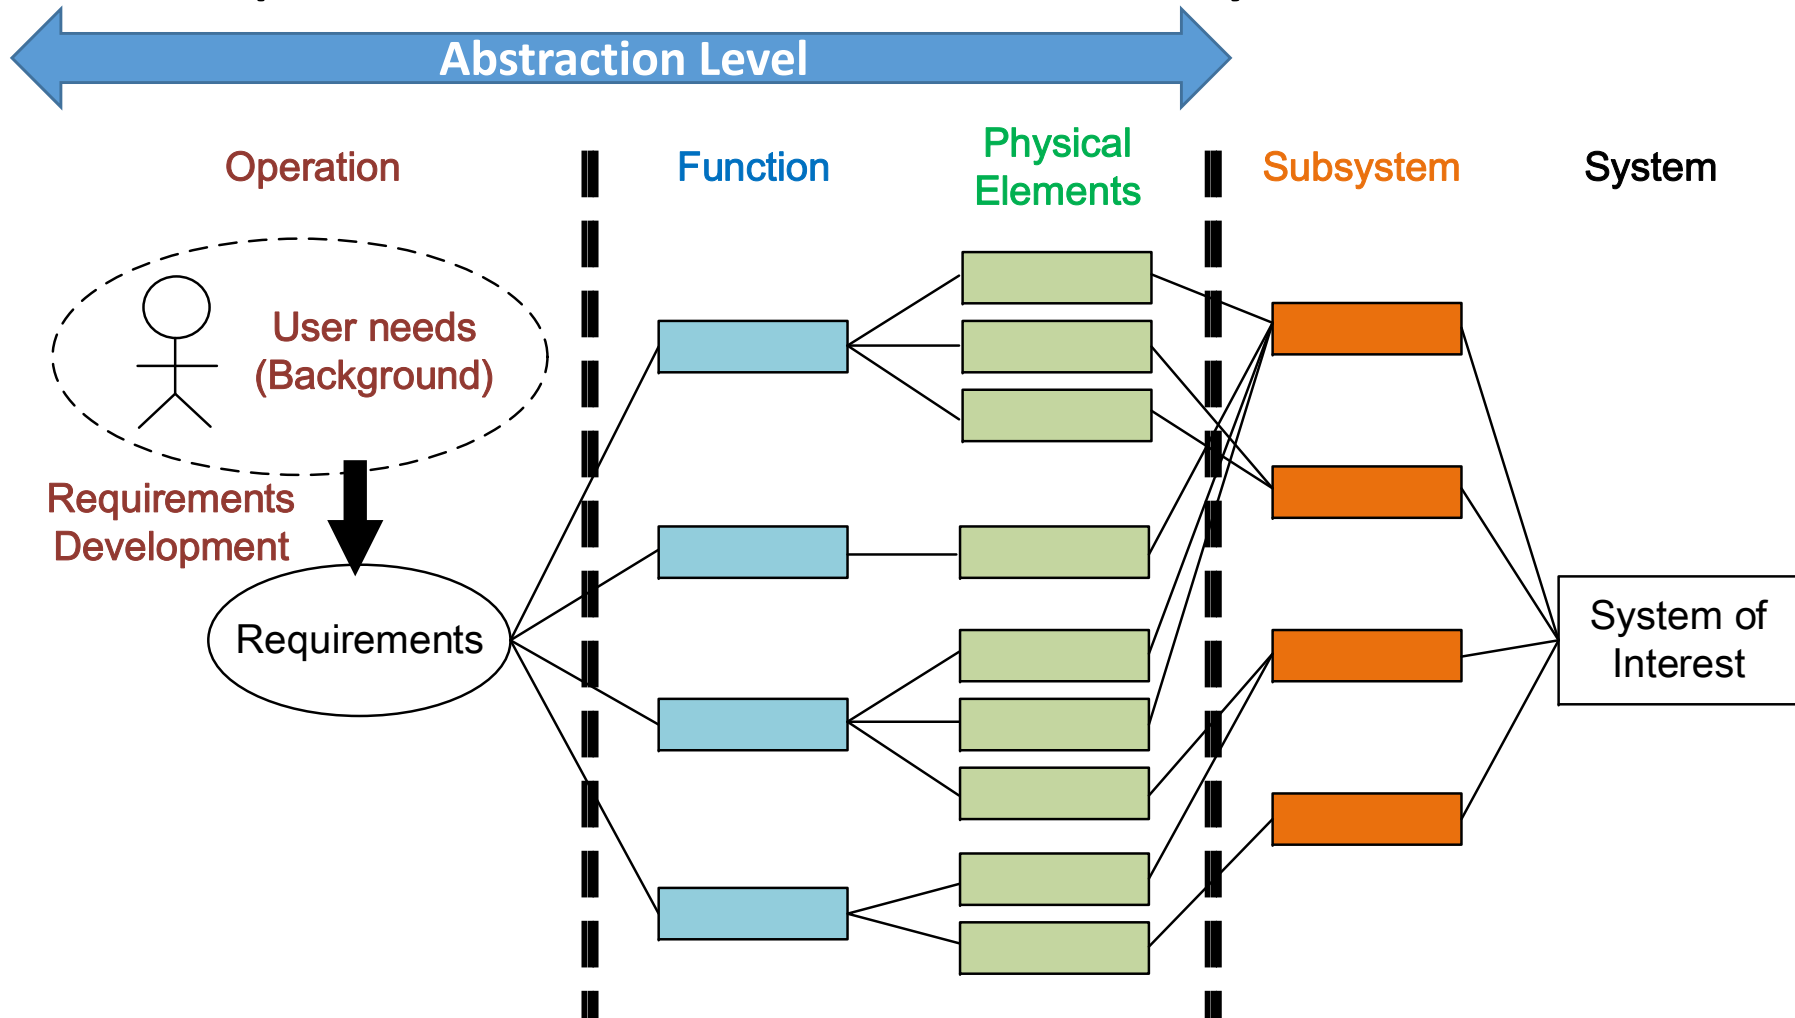

HEPTA Training? – Multi Point of View -15

- Abstract View (Operational & User Experiment) to Physical View (HW & SW)

HEPTA Training? – Multi Point of View -16

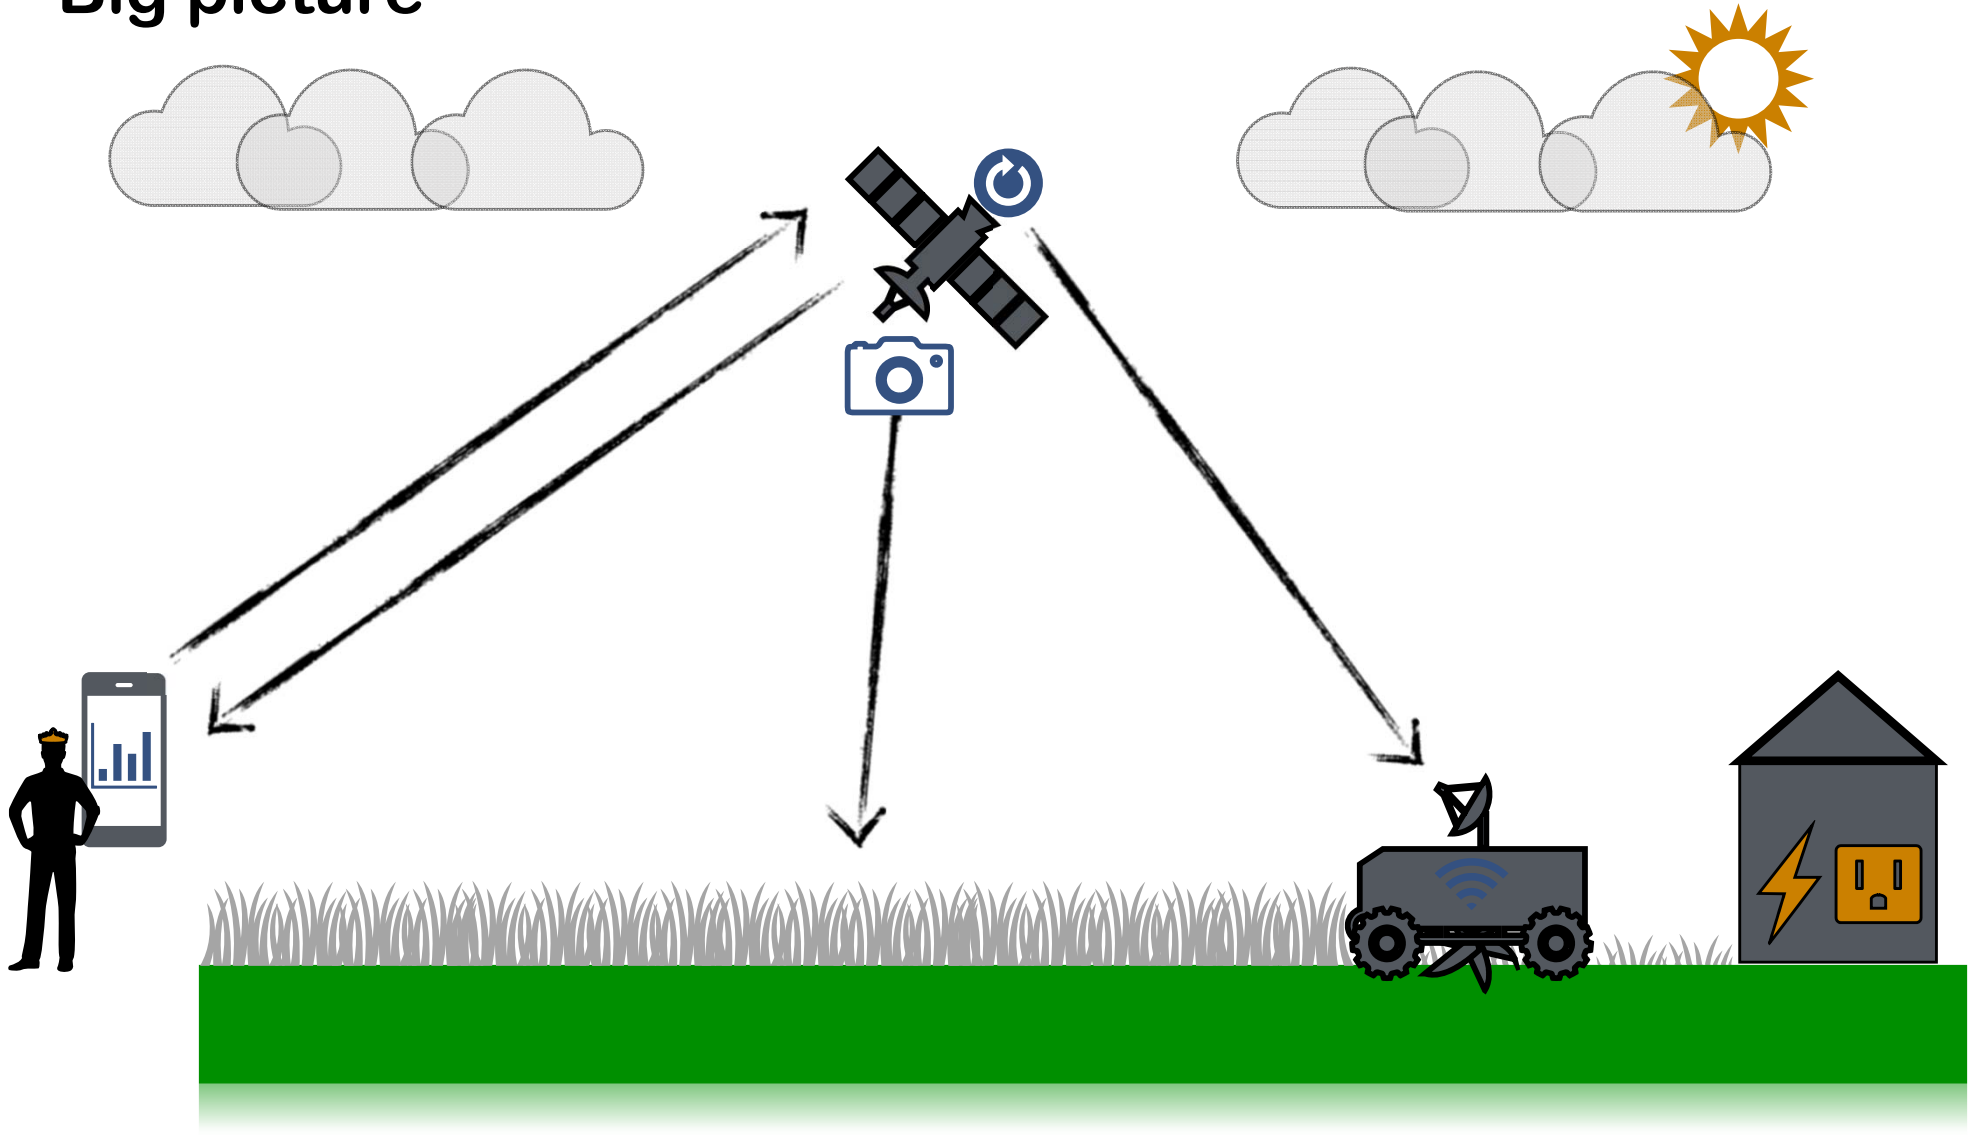

- Design and Integration experience.
- From requirement to element, From element to systems.

HEPTA Training? – Multi Point of View -17

- Abstract View (Operational & User Experiment) to Physical View (HW & SW)

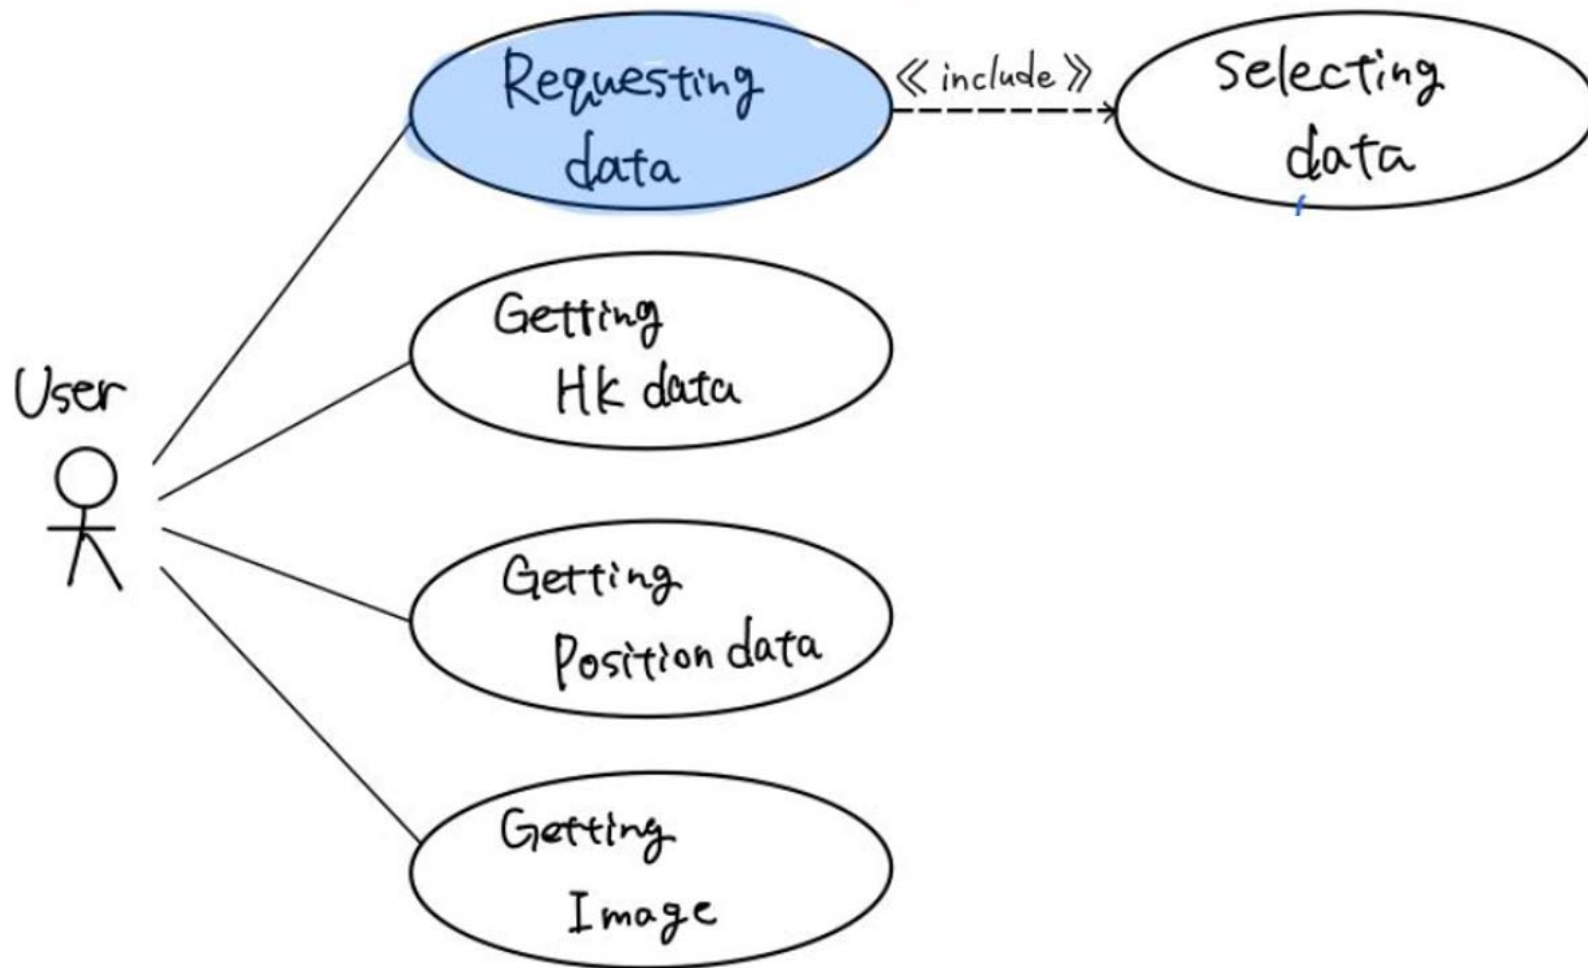

Big picture

HEPTA Training? – Multi Point of View -18

- Abstract View (Operational & User Experiment) to Physical View (HW & SW)

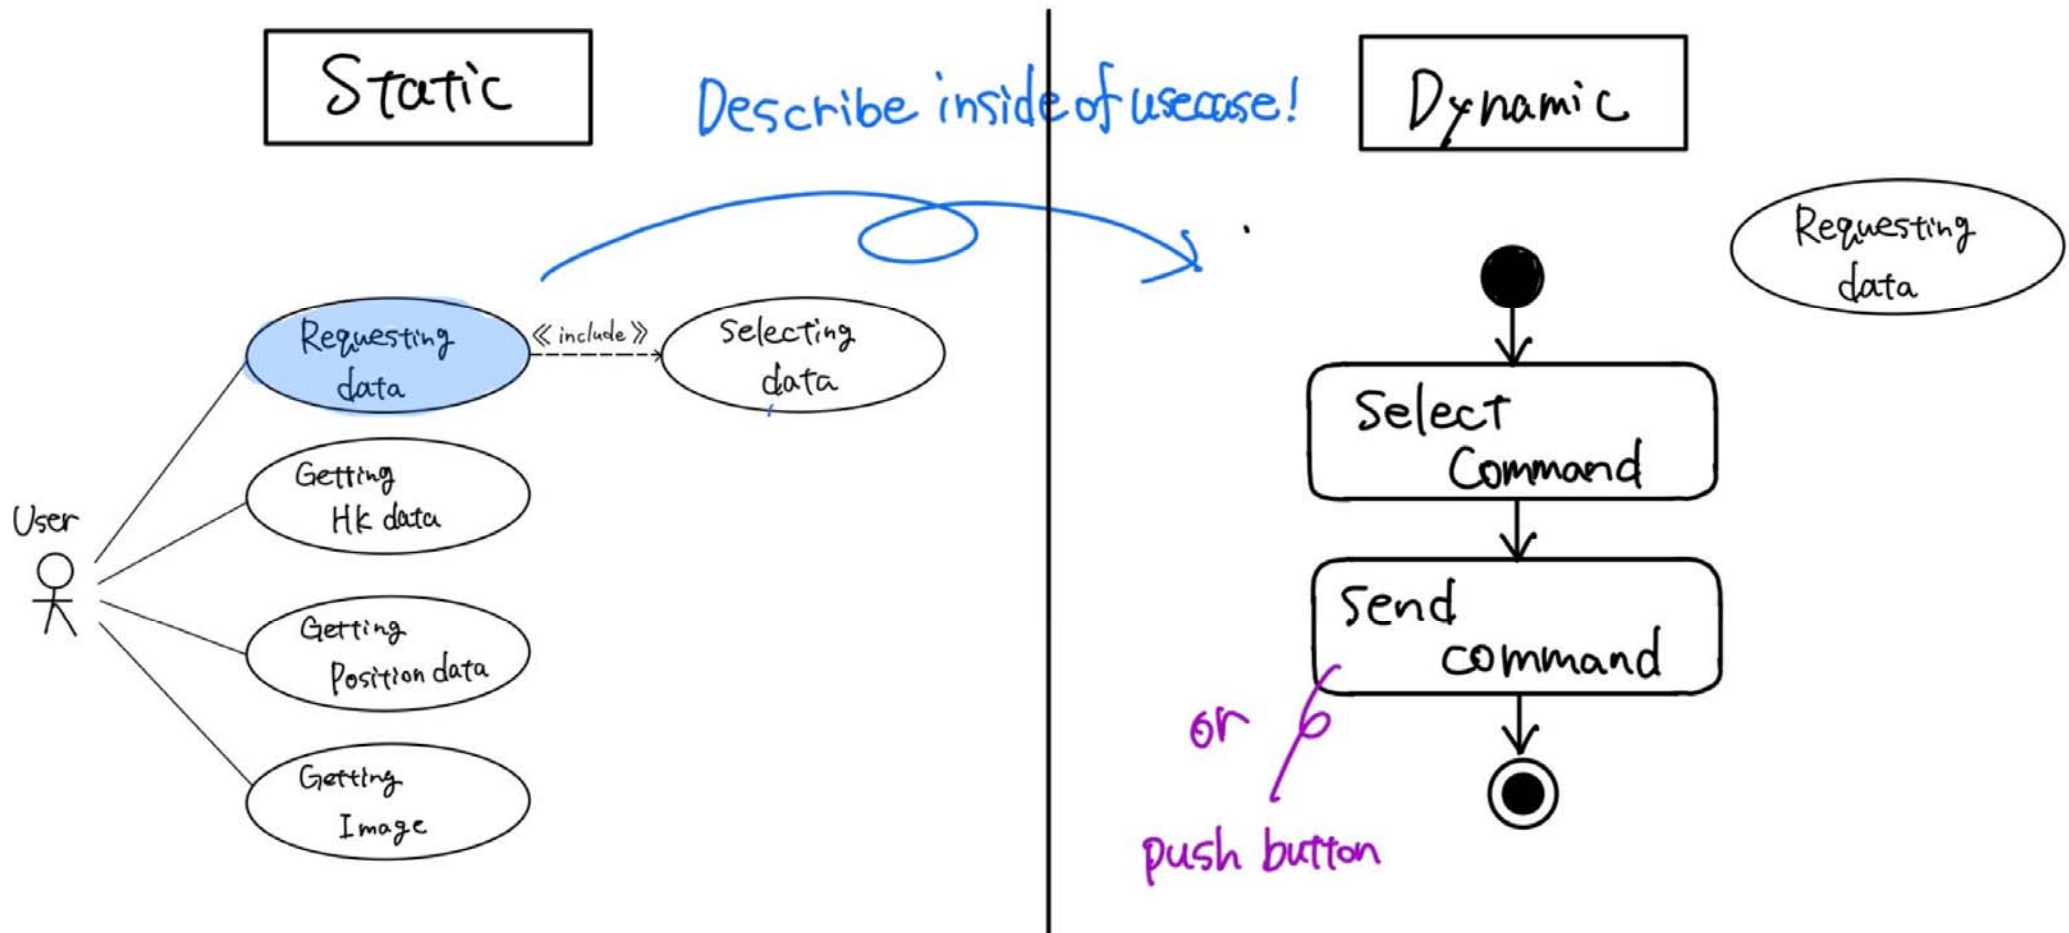

Static Operational model

HEPTA Training? – Multi Point of View -19

- Abstract View (Operational & User Experiment) to Physical View (HW & SW)

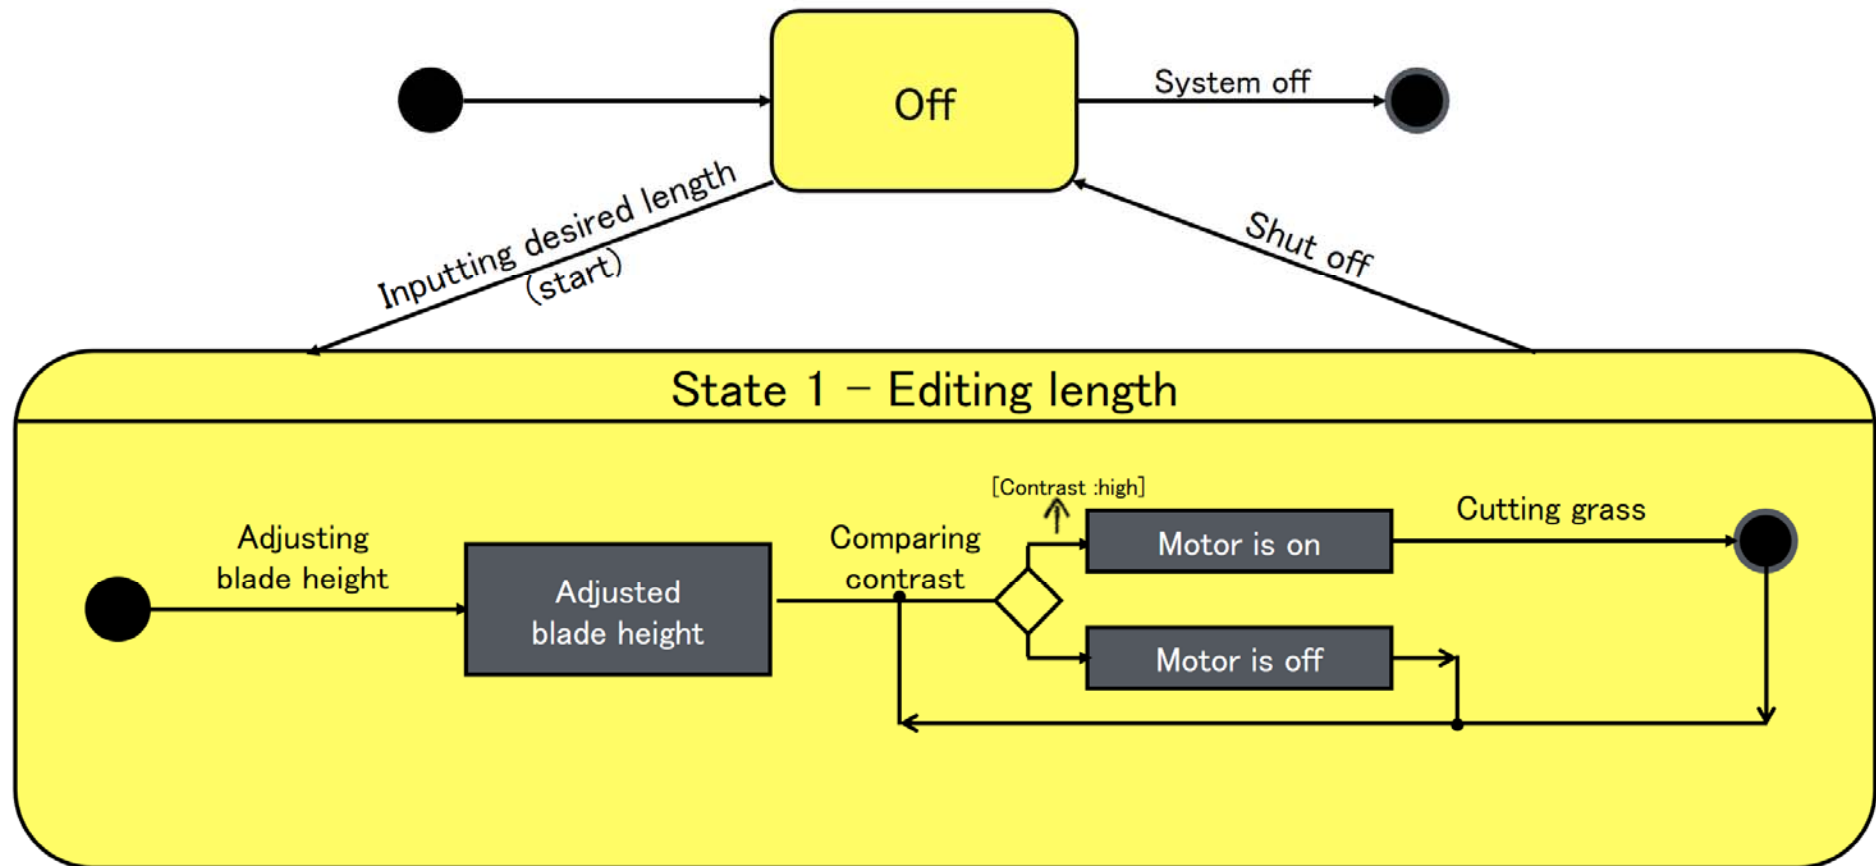

Dynamic Operational model

HEPTA Training? – Multi Point of View -20

- Abstract View (Operational & User Experiment) to Physical View (HW & SW)

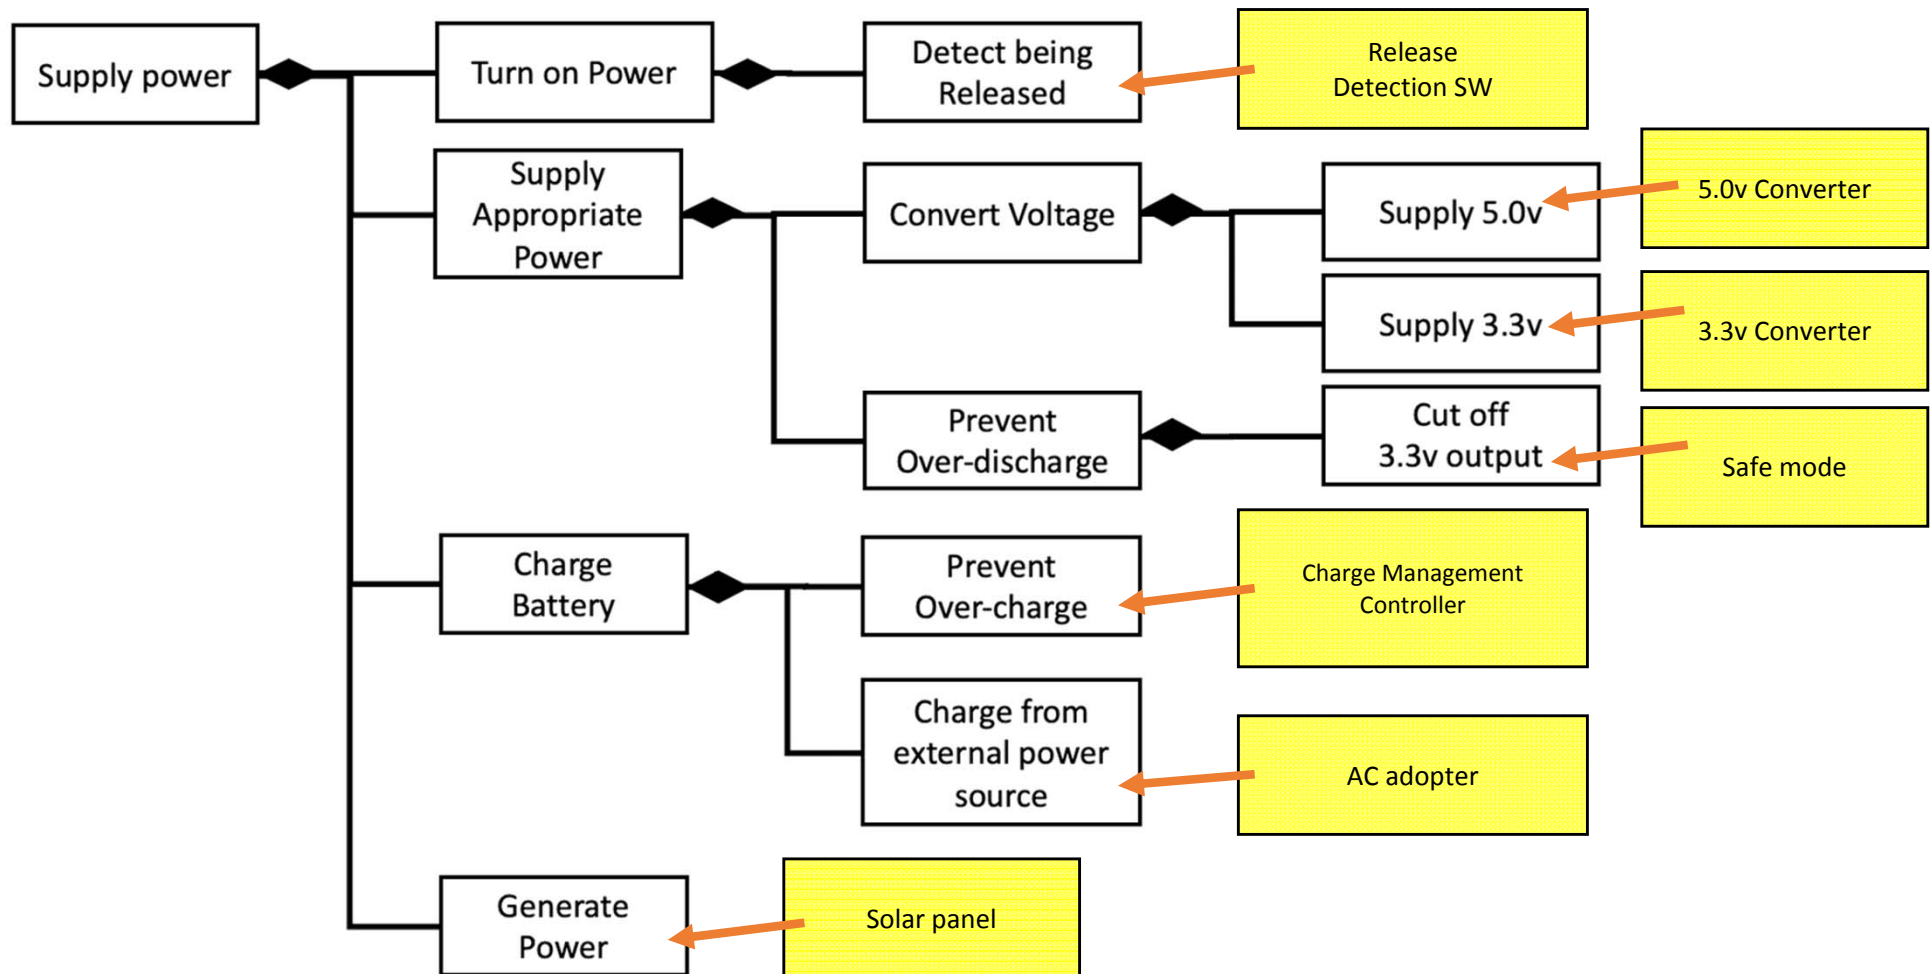

Dynamic Functional model

HEPTA Training? – Multi Point of View -21

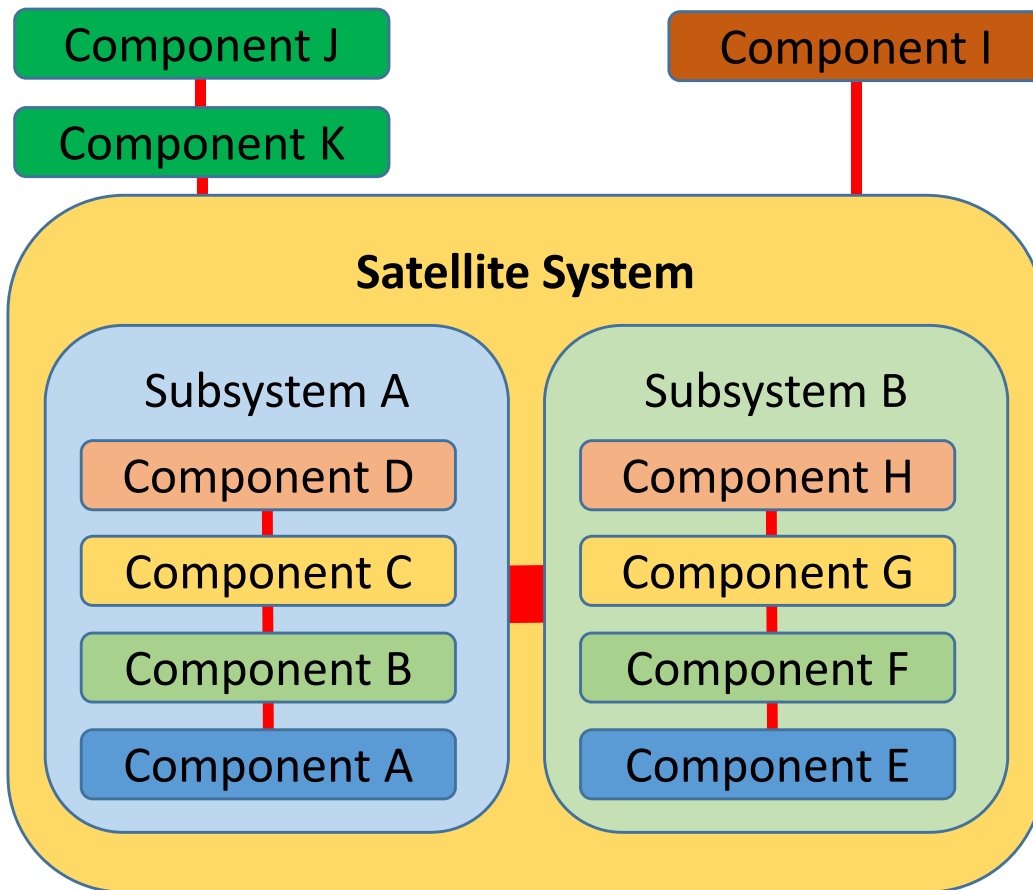

- Abstract View (Operational & User Experiment) to Physical View (HW & SW)

Static Functional model and Allocation

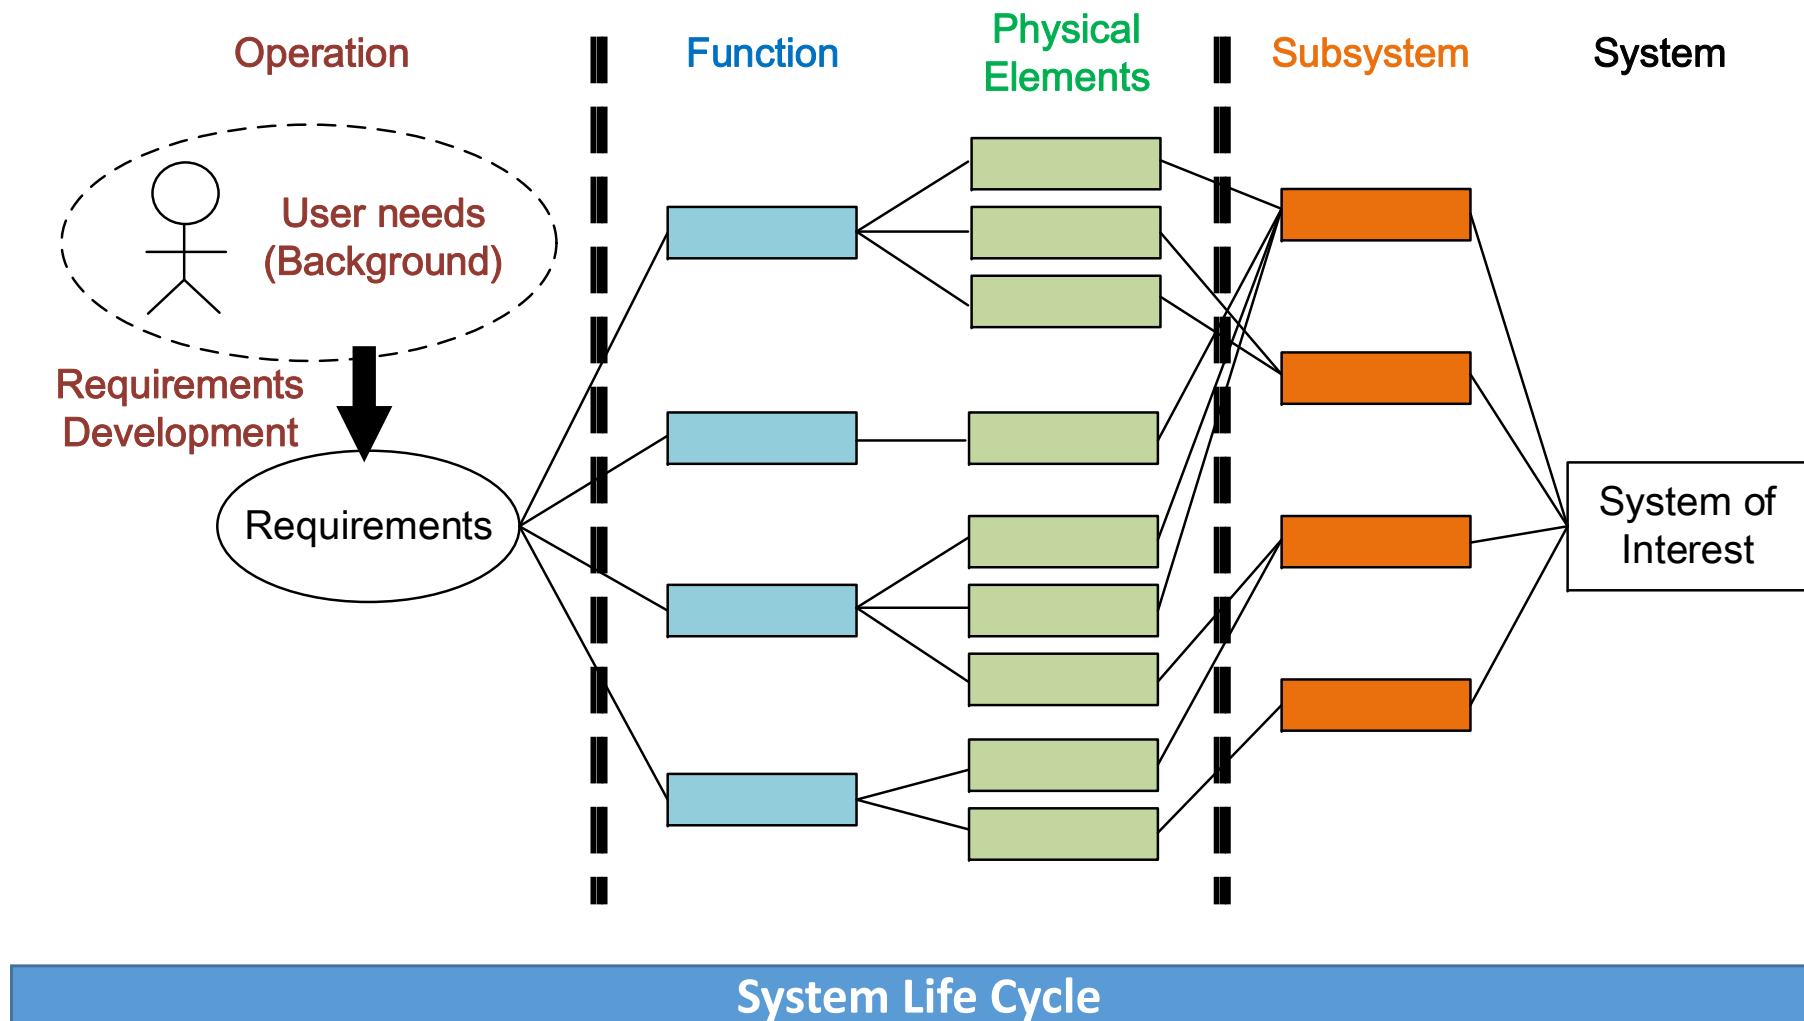

HEPTA Training? – System Integration 22

- From Element to Satellite System
- System has certain characteristics (functions / effects) by combining various elements such as hardware, software, people, data, service, e.t.c. to achieve one or more stated purposes.

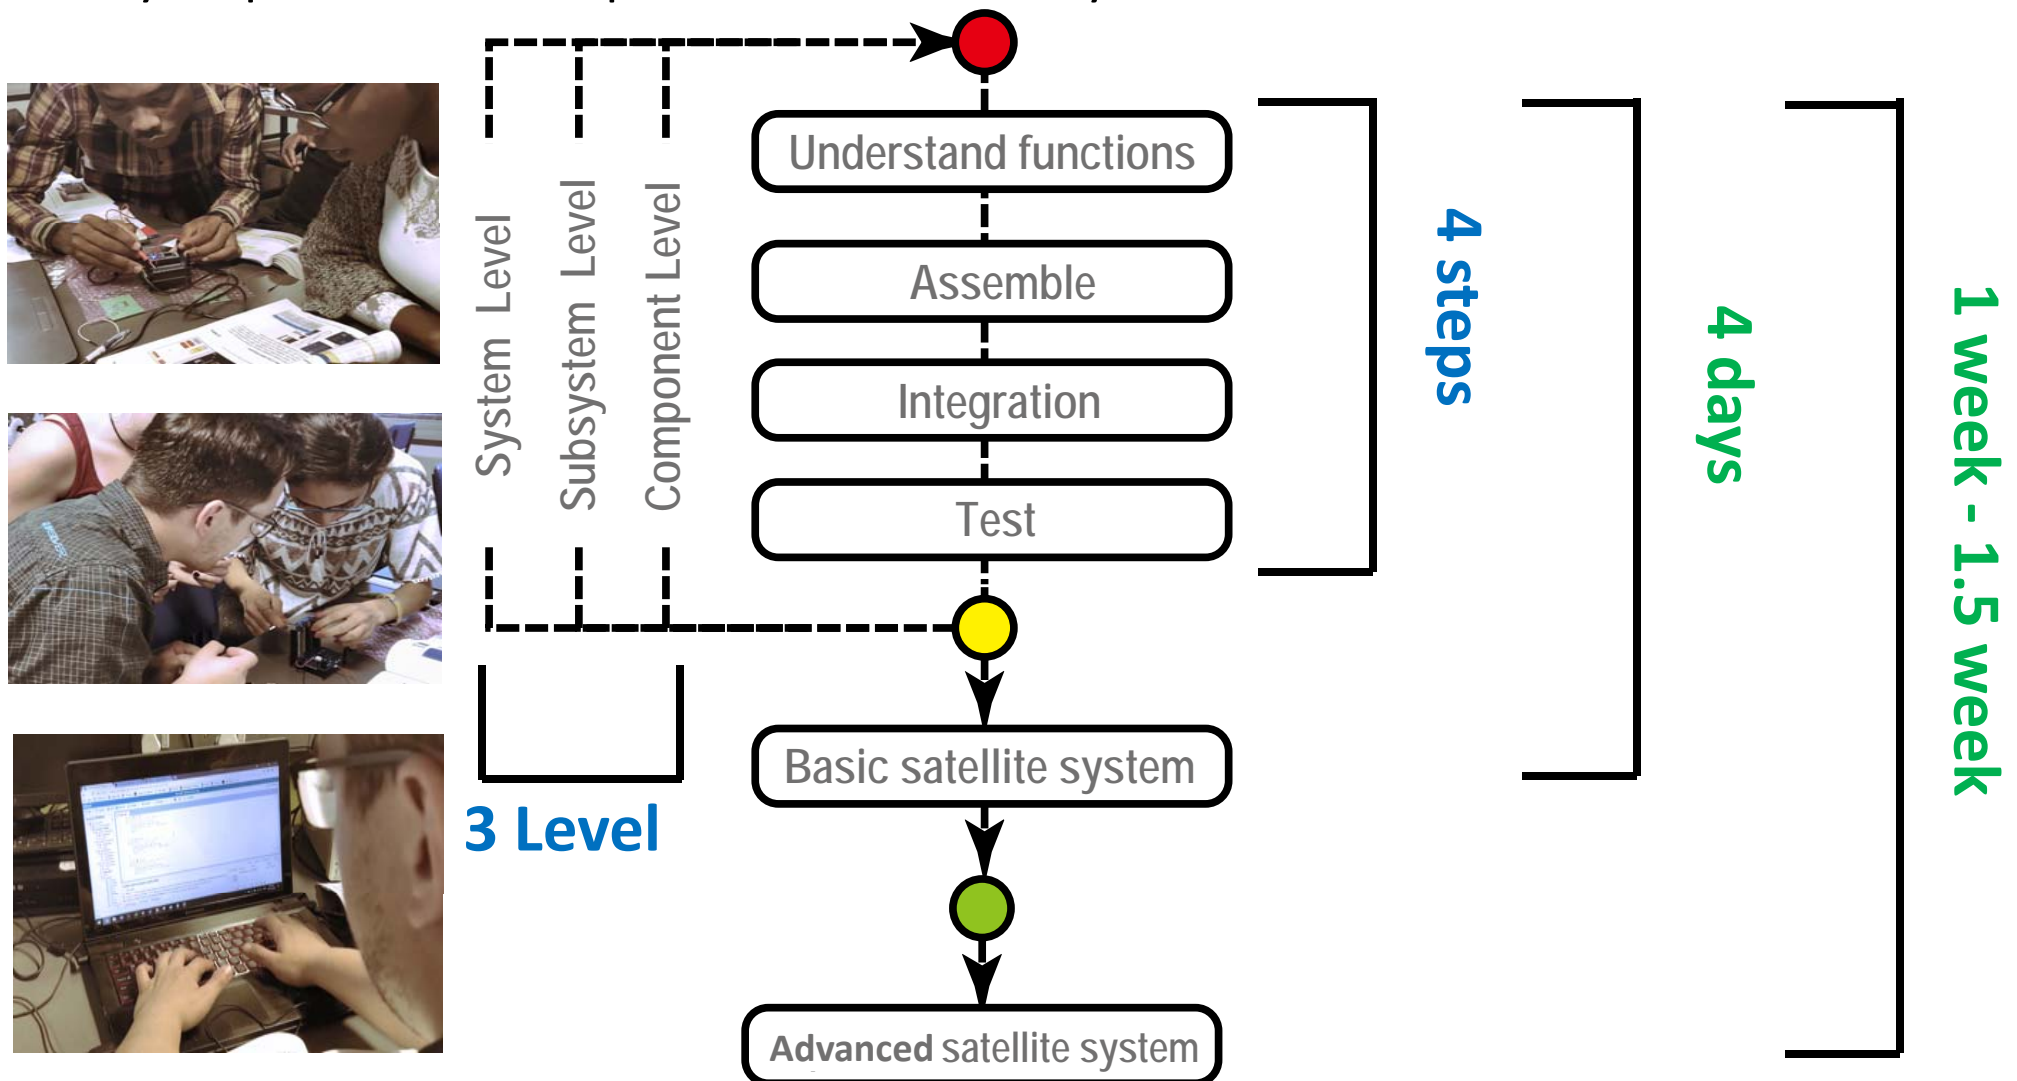

HEPTA Training? – System Integration 23

- Design and Integration experience.
- From requirement to element, From element to systems.

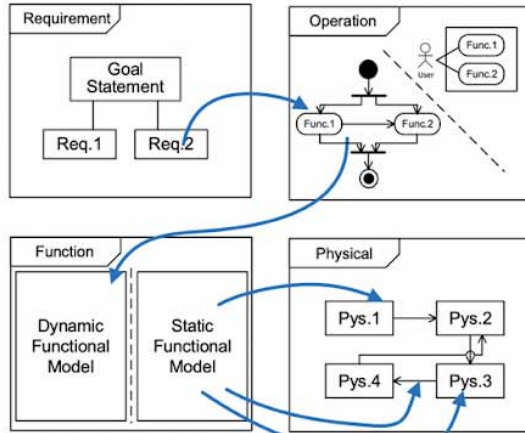

HEPTA Training? – Way of learning- 24

- Focuses mainly on understanding, assembling, integrating, and testing the function of the CubeSat model and carrying out it in a hands-on manner step by step from the component level to the system level.

6. Understand Systems Engineering

6.5 What is MBSE and Modeling Language?

40

Systems Engineering

Technology

3. Understand Structures of the Satellite

3.1 Piggyback satellites

- Micro/Nano satellites are often launched on rockets as piggyback satellites.

6

Space Development

Project Management

Exercise 1.2 Download

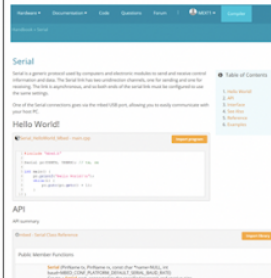

3. Create your program

3.2 Communication with PC

- Data Display

```
File name : Lab1-01_PC_communication
#include "mbed.h"
Serial pc(USBTXUSRX);
int main()
{
    pc.baud(9600);
    int i1 = 7;
    float i2 = 7.5;
    char i3 = 'H';
    char i4;
    pc.printf("Hello World!\n");
    pc.printf("i1 = %d\n", i1);
    pc.printf("i2 = %f\n", i2);
    pc.printf("i3 = %c\n", i3);
    pc.putc(i3);
    for(i1 = 0; i1 < 10; i1++) {
        pc.printf("i1 = %d\n", i1);
        i4 = pc.getc();
        pc.putc(i4);
    }
}
```

- The program on the left is written to display each variable type.
- Conduct internet search in the mbed handbook for other Serial Class functions.

19

Interactive Knowledge Transfer 26

Interactive Knowledge Transfer 27

Increasing understanding and Creating knowledge through experiencing sharing, verbalizing, deducing and internalizing in Knowledge Management Ba.

HEPTA-Sat Training

28

- (1) Getting Overview of **CubeSat Design and Development**.
- (2) Getting **Abstract to Physical design point of view**.
- (3) Getting **element to systems integration experience and insight**.

Step 1:
Lecture

Step 2:
Hardware Assembly

Step 5:
Field test

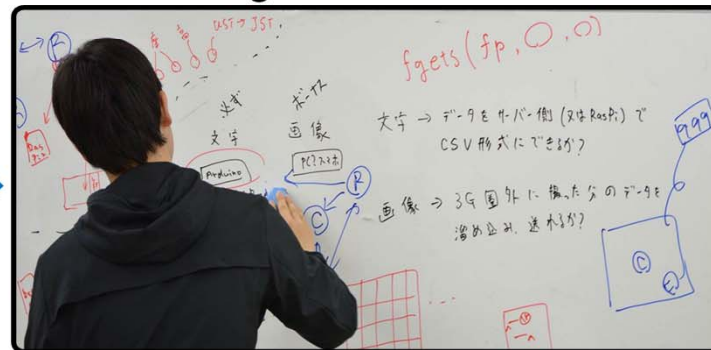

Congratulations!

Step 3:
Hardware & Software
Integration

Step 4:
Mission Design

Step 6:
Review & Presentation

3. Create your program

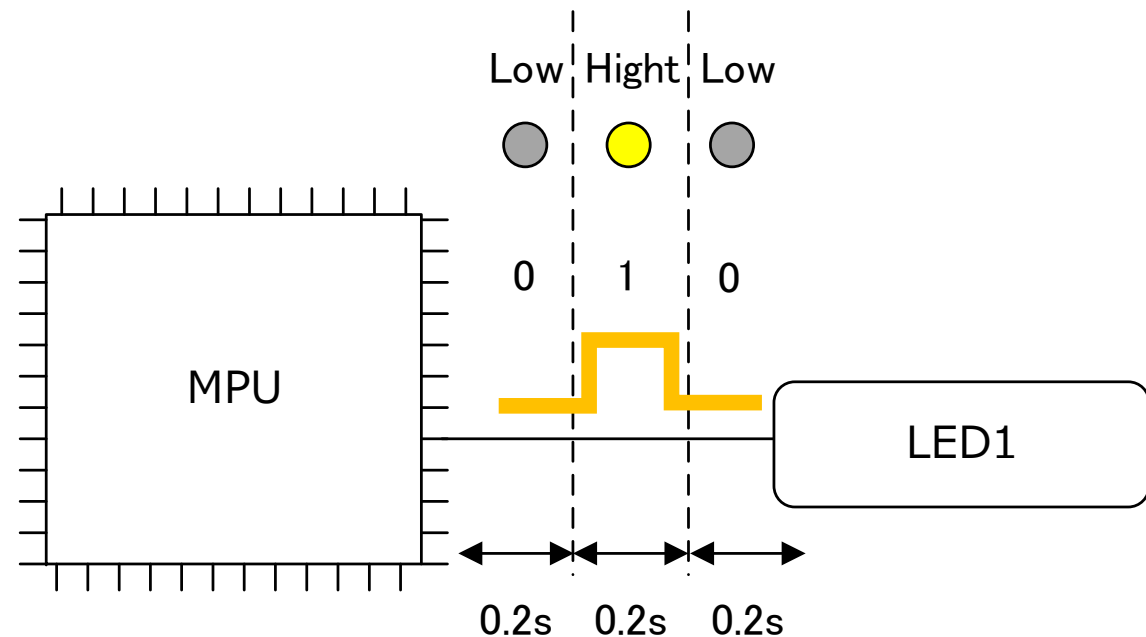

3.1 Create and Compile Blinky LED Hello World Program

- Blinking LED:
- After myled lights up for a duration of 0.2 seconds, `wait(0.2)`.
- After myled lights off for a duration of 0.2 seconds, `wait(0.2)`.

```
#include "mbed.h"
```

```
DigitalOut myled(LED1);
```

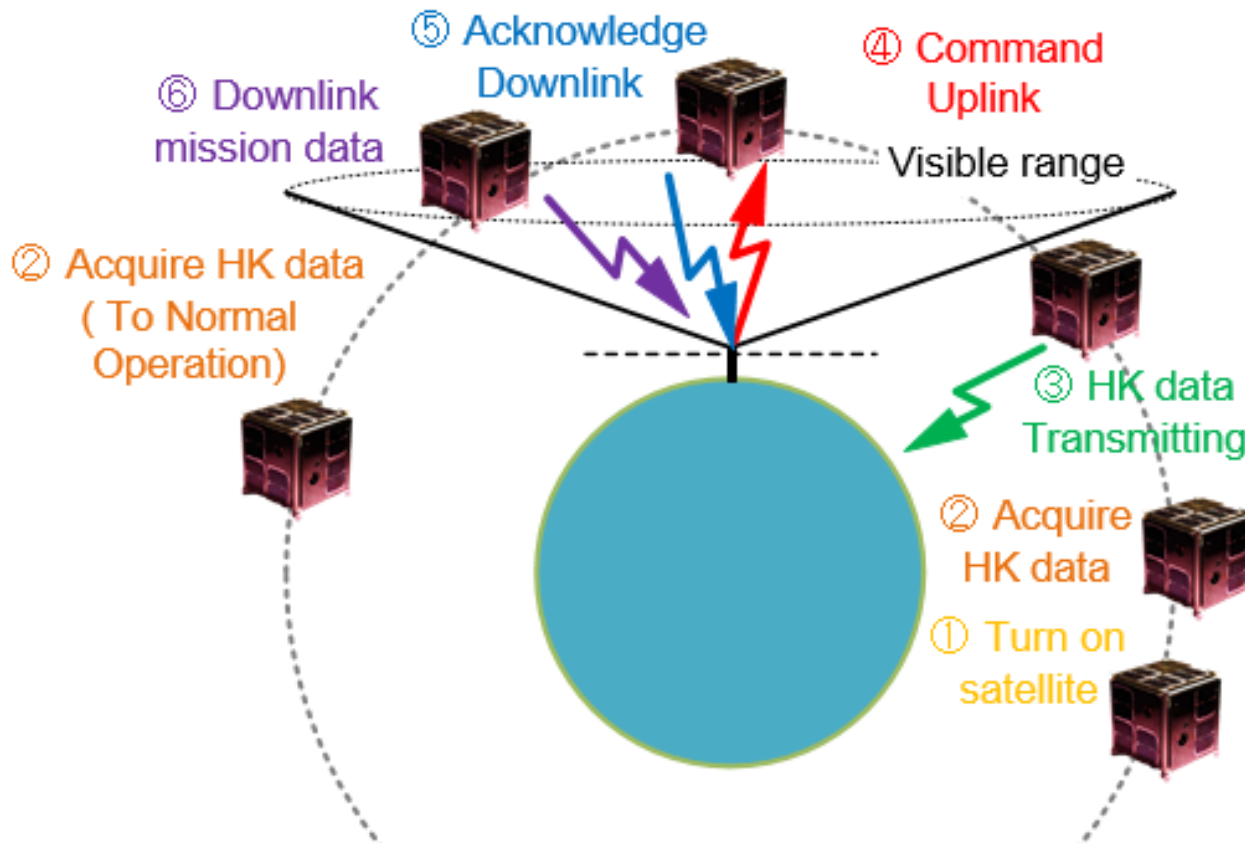

```
int main() {  
    while(1) {  
        myled = 1;  
        wait(0.2);  
        myled = 0;  
        wait(0.2);  
    }  
}
```

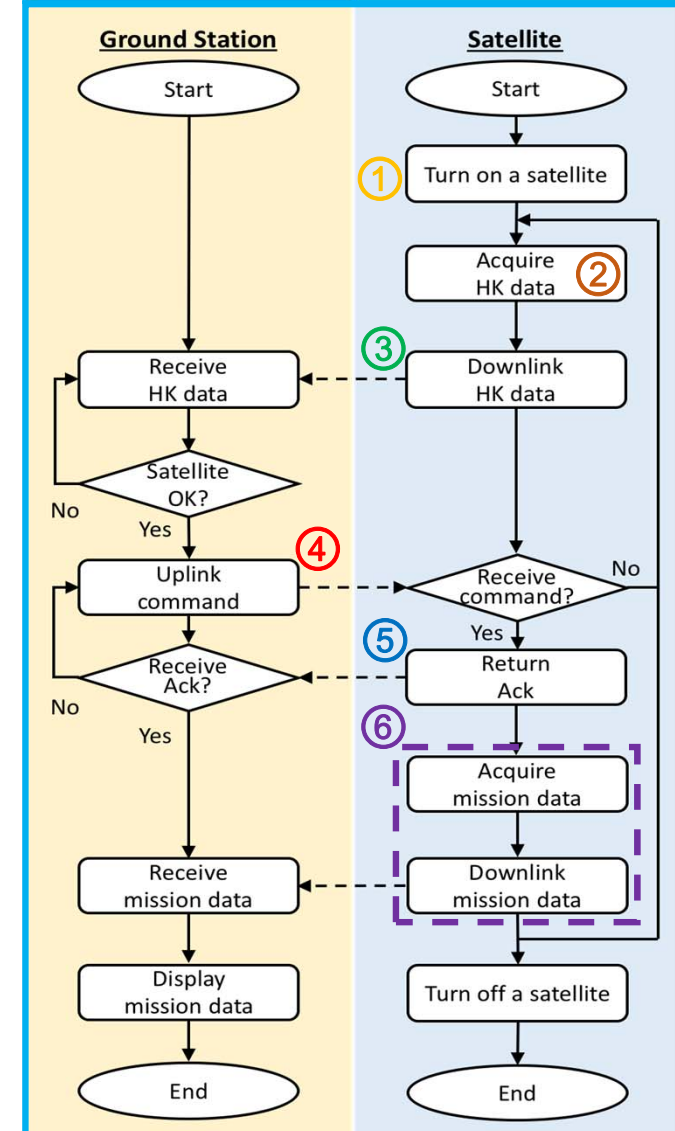

3. Create your program

3.6 Check and Create Satellite Program

- To understand a satellite software architecture, let's make the following type actual satellite program to simulate the satellite and ground station operation.

Program Structure

3. Create your program

3.6 Check and Create Satellite Program

- Originally the satellite uses communication device to communicate with space and the ground.
- But here let's use **USB cable** as **a communication device** and **PC** as **a ground station** for the simplicity (gradually increase a element Lab2, Lab3, Lab4...).
