

GLOBAL ANTENNA SHARING PROJECT for achieving Sustainable Development Goals

Prof.Dr. Alim Rustem Aslan
UNISEC-GLOBAL Steering Com.Member

Manager, Space Systems Design and Test Laboratory
Istanbul Technical University, Faculty of Aeronautics and Astronautics,
Istanbul, Turkey
aslanr@itu.edu.tr

A UNISEC-GLOBAL PROJECT

The Global Antenna Sharing Project initiated by

- Kyushu Institute of Technology,
UNISEC-Japan

in collaboration with

- Istanbul Technical University,
UNISEC-Turkey

with support of InfoStellar, Japan

What is UNISEC-Global?

- **University Space Engineering Consortium (UNISEC)-Global** is an **international NGO**, consisting of local-chapters across the world. Established in 2013, and accepted as permanent observer by UNCOPUOS in 2017.
- Its **primary objective** is to help create a world where space science and technology is used by individuals and institutions in every country, rich or poor for peaceful purposes and for the benefit of humankind.
- Has provided hands-on satellite training program, conferences and competitions

15 Local Chapters and
135 universities from
40 countries with 47 POC

Vision 2030-ALL

The 2030 Agenda for Sustainable Development

Key Principle:
No one will be left behind.

Vision 2030-ALL

*“By the end of **2030**,
let’s create a world where
university students can
participate in practical space
projects in **all** countries.”*

*Need wise strategies, partners,
collaborators and supporters*

***6th UNISEC-Global Meeting will be held at ISU
Strasbourg, France in Nov 19-21, 2018***

Main Goal of Project

- **Efficient use of *Micro/Nano Satellite systems (constellations)* (300 placed in orbit in 2017)**
 - *Sharing resources*
 - *Helping less developed institutions to reach higher levels*
 - *Increased usage time of expensive systems (ground stations)*
 - *Reduced downtime*
 - *Better use of systems*
- *help yourself help other*

how we can help SDGs...?

<https://sustainabledevelopment.un.org/sdgs>

Satellites Communication

Function of Ground Station

- Pointing to a satellite (Satellite tracking)
- Send telecommand to satellite
- Receive telemetry/mission data from satellite
- Process RF signal (Mod/Demodulation, Coding/Decoding)

Limitation of Communication Time

- Limited communication time window in LEO
- Average communication time = 40 minutes/day
- Require long time to download payload data

40 min/ 1day
[10min x 1 pass x 4 times]

Antenna Sharing

- Increase the number of tracking antennas

By connecting more antenna
Time Resolution Increases!

Advantage of Many Antennas

1 Antenna

1 Satellite with 1 Antenna
35-65 Min / day

Many Antenna

1 Satellite with 7 Antenna
145 Min / day

Time resolution increase up to 3 time!!

A solution: StellarStation

A cloud-based software platform that connects satellite operators with antenna owners, solving both the problem of **insufficient satellite access time** and **unused antenna idle time**.

The process is simple:

- Share your antenna's idling time and get credits.
- Use your credits to access other antennas around the globe.
- Exchange your credits for cash, or buy additional credits for even more antenna access time.

Graphical User Interface

A new standard for satellite ground stations

- Flagship product, StellarStation. Reshape the satellite operation scene in three major ways:
 1. Shifting the paradigm to antenna sharing, opening up large numbers of antennas for use and dramatically increasing access
 2. Solidifying satellite communications into a standardized system so that this increased access can be seamlessly utilized
 3. Creating a real-time transmission environment for satellites, thus lowering the barrier to entry on satellite operations

space development for everyone

- Building this new ecosystem for ground station networks, we hope to open the door for previously unachievable space development.
- Space for everyone !

StellarStation Amateur

- Built on the StellarStation platform, StellarStation Amateur provides free LEOP support for amateur UHF band satellites.
- Use StellarStation Amateur to access invaluable telemetry data and schedule passes using member worldwide antenna network during a critical phase of launch and satellite operations.

 Proposal of integration

GSN Device

Front Panel

Rear Panel

- Receiver
 - Satellite downlink signal reception
 - Output in IQ data (raw data)
 - Centralized demodulation and decoding are done by software defined radio (SDR) at Central Server.
- TLM transfer
 - Transfer IQ data or processed data to Central Server
- Transmitter (optional)
 - Satellite uplink signal transmission
 - Encoded and modulated IQ data from Centralized SDR at Central server and transmits uplink signal to satellite.

How use our GS network?

Go to: <https://www.stellarstation.com/amateur>
and Sign up for an account

StellarStation Amateur

Built on the StellarStation platform, StellarStation Amateur provides free LEOP support for amateur UHF band satellites. Use StellarStation Amateur to access invaluable telemetry data and schedule passes using our worldwide antenna network during a critical phase of launch.

Satellite	Ground Station	AOS
BugSat 1	Tokyo	00:50
FalconSat 3	Tokyo	02:34
CUTE 1	Tokyo	04:50
LilacSat 2	Tokyo	04:54
LilacSat 2	Tokyo	06:28
CUTE 1	Tokyo	06:29

Select satellite and download data

Latest Telemetry [2 days of tracking left](#)

Click for download

Use web based GUI to:

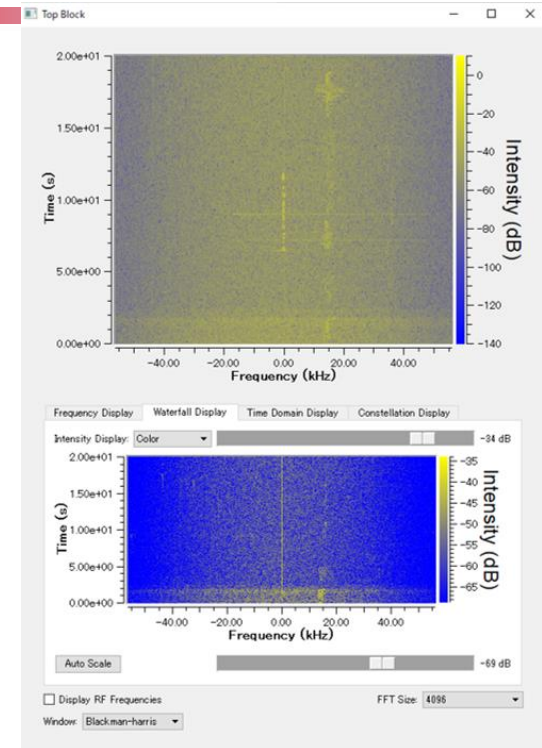

- Download telemetry (Raw Data) from satellites
 - See available passes across the world
- Demodulate / Decode in the cloud and view the Telemetry in browser.*

* To be available

Re-processing satellite downlink data

SDR#

GNU Radio

The satellite downlink data can be re-play and processing by using **SDR#** and **GNU radio**

How to join the Global Antenna Sharing Project with your Antenna

- Contact us to get a template of MoU.
- Review the MoU and make revisions that you deem necessary.
- Fill out Antenna Configuration Questionnaire: <https://goo.gl/forms/FNYypPrzHNR1V5vu2>
- A Block Diagram of your ground station is required to be sent.

Further Benefits

UNISEC-Global provides Information and help on:

- How to operate a satellite
- Regulations and frequency coordination
- Ground Station Network Access
- Frequency Sharing

Questions?
Thank you
