

How to Realize Vision 2030-All

(for Breakout session)

*“By the end of **2030**, let’s create a world where university students can participate in practical space projects in **all** countries/regions.”*

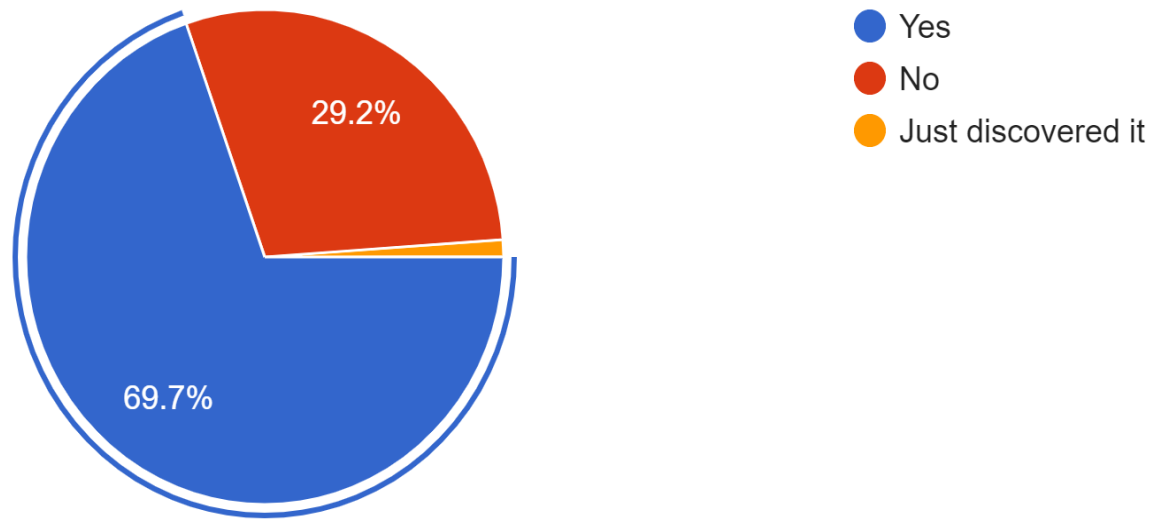

December 12, 2020

Rei KAWASHIMA
UNISEC-Global

Do you know Vision 2030-All?

Do you know "Vision 2030-All"? (If not, please check it at <http://www.unisec-global.org/>)

Rationale of the vision

- Every country/region needs **space-related experts** as they need to at least know what they should purchase or not - space-related products, such as communication satellites, GPS or earth observation services etc.
- Key principle of the 2030 Agenda for Sustainable Development (UN)
No one will be left behind.
- Gaps between space-faring countries and non-space-faring countries can be reduced in the education field relatively easily.

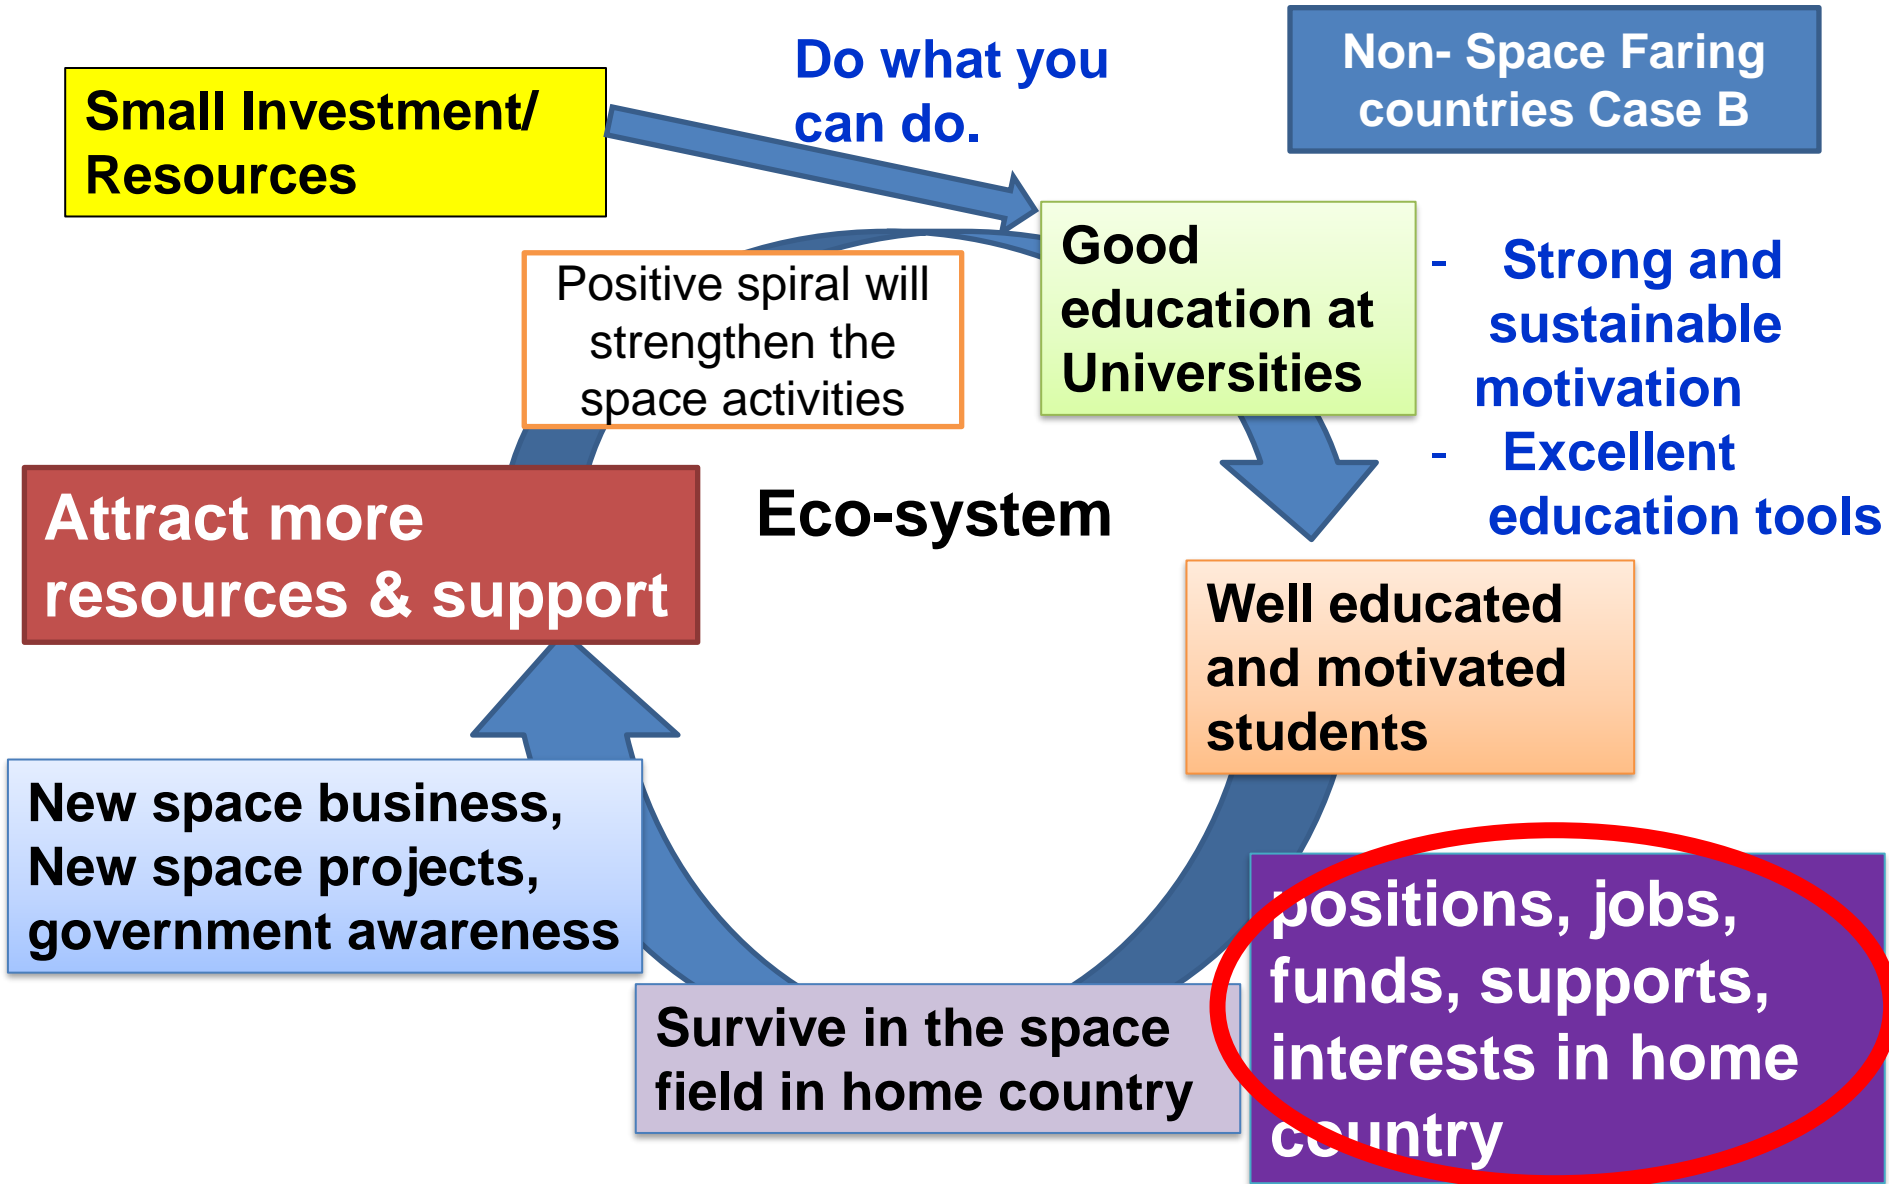

Eco-system Model of University Space activities

Eco-system Model of University Space activities

Eco-system Model of University Space activities

How to make “position, job, fund, support, interest” in home country?

- Take a position of regional/national representative of global space communities
 - UNISEC-Global, Space Week, SGAC, etc
- Organize/Join Space Education program/projects
 - HEPTA-Sat training, CanSat competition, Nano-satellite Mission Idea Contest, CubeSat project, etc.
 - Education to younger generation and non-scientist/engineer
- Launch a space-related company
 - Small is fine if it is sustainable
- Organize/Join Space Job Fair
 - In Japan, the 2nd space job fair took place on Dec 5-6.

Discussion Moderator

Discussion topics

- How to make “space-related positions, jobs, funding, support, interests” in your(their) country/region?
- Can you get support from government or non-governmental entities in your region? If not, why?
- How can global organization support local activities?
- Do you think Vision 2030-All can be realized in 2030?
