

STAMINA4SPACE

# BIRDS-4S (Maya-5 & Maya-6): The Filipino J-Cube Experience

48th UNISEC Meeting - Introduction to J-Cube  
September 21, 2024

STAMINA4Space-STeP UP (Batch 2 Scholars)

# PRESENTATION OUTLINE

- 01** What is the BIRDS-4S Project?
- 02** Satellite Overview
- 03** Satellite Missions & Subsystems Overview
- 04** Project Activities and Timeline
- 05** Project Conclusion

Maya-2 (BIRDS-4)

# HERITAGE

BIRDS-4S

Maya-5

Maya-6

The BIRDS-4S is a project of the **Department of Science & Technology - STAMINA4Space** (Philippines' space initiative project, and predecessor of the Philippine Space Agency )

Its local university partner is the **University of the Philippines - Diliman**

Its partner university in Japan is the **Kyushu Institute of Technology**

**Kyutech**  
Kyushu Institute of Technology

The University partnership as well as the deployment of the satellite via the KIBO module within the ISS was made possible by the **University Space Engineering Consortium (UNISEC)** and **Japan Aerospace Exploration Agency (JAXA)**

To **continue Philippines' satellite development** while transitioning to **locally fabricated satellites** by designing, building, testing, launching and operating satellites that will serve as the heritage for future CubeSat missions

# MEMBERS

**ALVAREZ,  
Anna Ruth**

- Communications Subsystem
- Assistant Project Manager

**CHUA,  
Angela "AC"**

- Camera Mission (CAM)
- Image Classification (ICU)
- ADCS Mission
- Missions Lead

**COLAMAR,  
Ronald**

- EPS Subsystem
- TMCR Mission
- Backplane Board (BPB)
- AIT Lead

**MACARAEG,  
Khazmir "Val"**

- Hentenna Mission
- Antenna Subsystem
- Frequency Coordination
- Comm. Subsystem Lead

**DOLORIEL,  
Chandler "Timm"**

- On-Board Computer (OBC)
- Image Classification (ICU)

**TAGABI,  
Gio Asher**

- Experimental OBC (OBC-EX)
- ADCS Mission

**CO,  
Joseph "JJ"**

- Store and Forward Mission
- APRS-DP Mission
- Ground Station
- Project Manager

**REMOCALDO,  
Genesis "Jimbo"**

- Structure Subsystem
- Antenna Deployment

# SATELLITE OVERVIEW

	Maya-5 & Maya-6
<b>Class</b>	CubeSat (Nanosatellite)
<b>Mass</b>	Approx. 1kg
<b>Dimensions</b>	10cm x 10cm x 10cm (Stowed State)
<b>Orbit</b>	Low Earth
<b>Launch Date</b>	June 2023
<b>Deployment from ISS</b>	July 2023
<b>Mission Duration</b>	Approx. 1 year (Deorbited)

	Maya-5 & Maya-6
<b>Subsystems</b>	<ul style="list-style-type: none"><li>- On-Board Computer (OBC)</li><li>- Electrical Power System (EPS)</li><li>- Communications Subsystem (COM)</li><li>- Antenna and Antenna Deployment</li><li>- Structure</li><li>- Backplane Board</li><li>- Ground System</li></ul>
<b>Missions</b>	<ul style="list-style-type: none"><li>- Camera Mission (CAM)</li><li>- Image Classification Unit (ICU)</li><li>- Store-and-Forward (SF-WARD)</li><li>- APRS-Digitpeater Mission</li><li>- Hentenna Mission</li><li>- Attitude Determination and Control System (ADCS)</li><li>- Experimental On-Board Computer (OBC-EX)</li><li>- Total Ionizing Dose Measurement of On-Board COTS and Rad-Hard Components (TMCR)</li></ul>

# SATELLITE OVERVIEW

The satellite has a total of **6 external panels** and **7 interior boards**.

1 Antenna Panel

5 Solar Panels

2 Mission Boards

5 Subsystem Boards

# SUBSYSTEMS OVERVIEW

## On-Board Computer (OBC)

- "Brain" of the satellite. Manages data, executes commands, monitors the satellite.

## Electrical Power System (EPS)

- Controls the power supply of the satellite.

## Communications Subsystem (COM)

- Main communication between the satellite and GS. Receives command, and transmits data and CW beacon.

## Antenna & Antenna Deployment

- Enable communication via VHF and UHF bands.

## Structure

- Ensures CubeSat structure accommodates requirements.

## Backplane Board (BPB)

- Connects subsystems and mission boards together.

## Ground Station (GS)

- Communicates with the satellites by sending commands and receiving telemetry and mission data.

# MISSIONS OVERVIEW

## Camera Mission (CAM)

- Main “eye” of the satellite. Captures images from space.

## Image Classification Unit (ICU)

- Images from CAM is processed and classified on-board by an AI model.

## Store & Forward (SF-WARD)

- Collects data from sensors from remote location and forwards them to GS.

## APRS-Digipeater Mission (APRS-DP)

- Automatic packet reporting system
- Satellite acts as a “signal tower” for radios.

## Hentenna Mission

- Experimental mission to use 1U CubeSat frame as an antenna

## ADCS

- Attitude Determination and Control System
- Use to determine the location and orientation of the satellite.
- To stabilize the satellite after deployment.

## TMCR

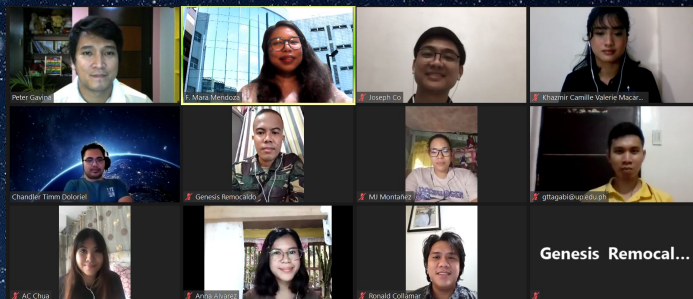

- Determine radiation endurance of COTS components by comparing the ground and on-orbit test data.

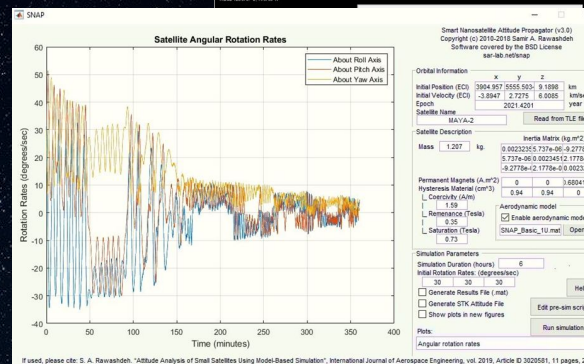

## Experimental OBC (OBC-EX)

- Locally designed experimental OBC which integrates the function of OBC and ADCS

# PROJECT ACTIVITIES (1/7)

**SEPT 2020** - Project Orientation and Kick-off

**OCT-NOV 2020** - Individual research of satellite, coding and simulation

# PROJECT ACTIVITIES (2/7)

**MISSION DESIGN REVIEW**  
MAYA-5 & MAYA-6  
November 27, 2020

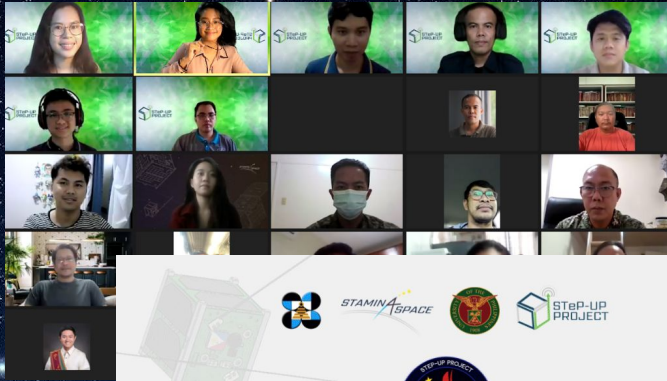

The banner features the STAMIN SPACE logo, the University of the Philippines logo, and the STP-UP PROJECT logo at the top. The text is centered in a white box with a blue and orange gradient background.

**NOV 2020** - Mission Design Review (MDR)

**DEC 2020-JUL 2021** - Arrival of satellite parts from Japan; Engineering Model (EM) assembly and testing

# PROJECT ACTIVITIES (3/7)

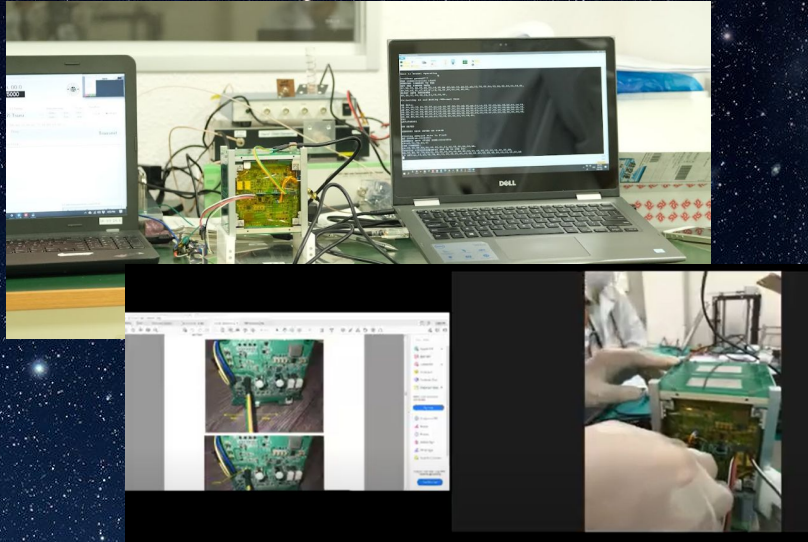

**PRELIMINARY DESIGN REVIEW**  
MAYA-5 & MAYA-6  
July 8, 2021

**JUL 2021** - Preliminary Design Review  
(PDR)

**JUL-NOV 2021** - EM integration and  
testing

# PROJECT ACTIVITIES (4/7)

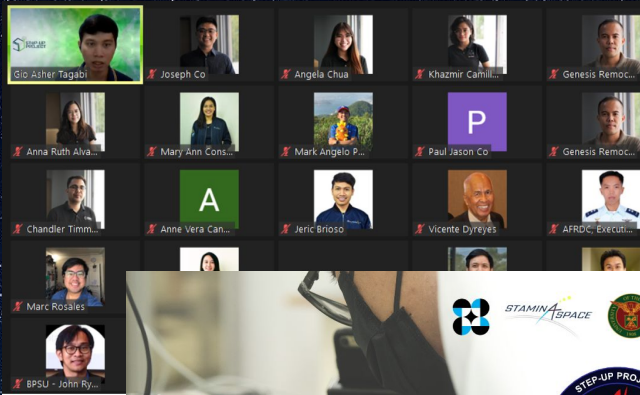

**DEC 2021-FEB 2022**

- EM space environment testing in KyuTech  
(online - done by BIRDS-4 members in  
Japan)

**MAR-APR 2022** - Flight Model (FM)  
assembly and testing

# PROJECT ACTIVITIES (5/7)

**APR 2022** - Critical Design Review  
(CDR)

**APR-JUL 2022** - FM integration and  
testing

# PROJECT ACTIVITIES (6/7)

**AUG-SEP 2022** - FM space environment testing in Kyushu Institute of Technology, Japan

**FEB 24, 2023** - Turnover of satellites to JAXA

# PROJECT ACTIVITIES (7/7)

**JUN 5, 2023** - Launch to ISS  
via SpaceX Falcon 9

**JUL 19, 2023** - Deployed from ISS via  
"KIBO" or Japanese Experiment  
Module (JEM) Small Satellite Orbital  
Deployer-26 (J-SSOD-26)

Being part of the BIRDS-4S project and being able to learn how to develop and test a satellite is both **honor** and a **privilege**. Thanks to DOST, UP-Diliman, KyuTech, UNISEC and JAXA for this great opportunity!

STAMINA SPACE

# Thank You!
