History of Local Chapter Activities

The Mexican section was created in 2014 by the universities of northern Mexico

UNISEC-Mexico Activities in 2024 Votes POC

Voting was carried out for the election of the Mexican representative to UNISEC GLOBAL, with Dr. Hermes Moreno Álvarez being chosen.

POC-Mexico: Hermes Moreno Álvarez

- News
- Multimedia
- Members
- Publications
- etc.

The website unisecmexico.mx was acquired, in which different types of announcements, news from the cosmonautical field and UNISEC's own activities will be made.

HERMES MORENO ÁLVAREZ
REPRESENTANTE DE CHIHUAHUA

ANTONIO GÓMEZ ROA
REPRESENTANTE BAJA CALIFORNIA

SILVIA KARINA REYES LÍO REPRESENTANTE NOGALES

BARBARA BERMÚDEZ REYES
REPRESENTANTE MONTERREY

OSCAR MARTÍNEZ HERNÁNDEZ REPRESENTANTE TAMAULIPAS

ROSA MARÍA MARTÍNEZ GALVÁN REPRESENTANTE PUEBLA

UNISEC MÉXICO University Space Engineering Consortium

Organizer election

Voting was carried out for the next venue of the cansat competition in Mexico, which will take place in the city of Nogales Sonora in the month of October 2025.

UNISEC-Mexico Activities in 2024 Workshop 2024

The first junior research workshop on cosmonautical engineering was organized at the Autonomous University of Chihuahua

UNISEC-Mexico Activities in 2024 Workshop 2024

The participation of more than 80 students and around 35 projects presented in different areas such as propulsion, controllable dynamic systems, flight dynamics and control, among others.

Workshop 2024

Workshop 2024

ORBITA GEOESTACIONARIA

Investigación de la caracterización de la órbita Geoestacionaria del Satélite TEMPO para la detección de partículas contaminantes suspendidas desde la ciudad de México hasta las arenas petrolíferas canadienses

Diego Fernando Grajeda Hernandez, Carlos Ernesto Bernal Lino, Sebastián Rivera Reyes, Owen Emmanuel Salais Estrada, Mariana Espinoza Rivera, Edgar Andrés Ávila Peña, Mizael Castellanos Serví, Ramón Alvaro Chaparro Saenz, Jonathan Ávalos Hernández, y Hermes Moreno Álvarez Universidad Autónoma de Chihuahua

Resumen: Este trabajo se centra en la caracterización de la órbita geoestacionaria utilizada por el satélite TEMPO para la medición de partículas contaminantes suspendidas en el aire en América del Norte. El área de estudio abarca desde la Ciudad de México hasta las arenas petrolíferas canadienses y desde el Atlántico hasta el Pacífico. El satélite TEMPO, posicionado en una órbita geoestacionaria, permite realizar mediciones cada hora con una alta resolución espacial.

Introducción

El presente proyecto aborda el análisis aerodinámico de aeronaves ligeras de las categorías Very Light Aeroplanes (VLA) y Very Light Jets (VLJ) utilizando métodos de dinámica de fluidos computacional (CFD). Este enfoque permite realizar simulaciones detalladas de los flujos de aire alrededor de las aeronaves para mejorar sus características aerodinámicas, optimizar su diseño evaluando su estabilidad y rendimiento en diferentes condiciones de vuelo. [1]

Los resultados se presentaron en gráficos de fuerzas y momentos aerodinámicos en función del ángulo de ataque. [1]

Reforma

A relevant issue for our country is the reform that has been made to the constitution regarding the regulation of activities in outer space. This proposal was made by Deputy Jesús Roberto Briano Borunda. With the reform, exploration activities in outer space are incorporated into the Constitution, which will allow harmonizing secondary legislation with international standards and establishing investment schemes for the development of space technology.

UNISEC-Mexico Activities in 2024 Challenges for 2025

- 1. Increase the number of members to represent each states,
- 2. Continue the CanSat Competition,
- 3. Organize the first congress about cosmonautical engineering,
- 4. Establish partnerships with industry and government.

Thank you!!!
